FIRST MAIN PAPER

Section A; Hydrobiological Studies on the
Ajwa Reservoir at Baroda 1 to 133

Section B: Biology of the Nimeta Water Works
at Baroda 134 to 189

TWO ADDITIONAL PAPERS

- (i) Pretreatment & Filtration at the
Nimeta Water Works, during
1962 to 1964 190 to 203
- (ii). Control of Aquatic Vegetation in
Raw Water Storage Reservoirs..... 204 to 225

Page No.

1. Introduction	1
2. Climatological data	7
3. Materials and Methods.	11
4. Section A: <u>THE AJWA RESERVOIR</u>	19
a) <u>Physical Conditions</u>	19
i) Location	19
ii) Morphometry.	20
iii) Edaphic and Geological factors	22
iv) Water level.	24
v) Colour	25
vi) Temperature characteristics.	25
vii) Hydrogen ion concentrations (pH)	39
Summary of physical conditions	43
b) <u>Chemical Environment and Nutrient Supply.</u>	44
<u>General characteristics of the water.</u>	44
viii) Total Solids.	44
ix) Alkalinity	45
x) Hardness	51
xi) Chloride	52
<u>Dissolved Gases.</u>	
xii) Free Carbon dioxide.	52
xiii) Dissolved oxygen	53
xiv) Percentage saturation of oxygen	59
<u>Ions involved in Plant Nutrition</u>	65
xv) Inorganic forms of nitrogen.	65
xvi) Phosphate	67
xvii) Silica.	67
xviii) Iron	68
xix) Calcium	68
xx) Magnesium	69
xxi) Sodium.	69
xxii) Potassium	69

XIV

	Page No.
<u>Dissolved organic matter</u>	69
xxiii) Permanganate oxygen consumed	69
Summary of Chemical Conditions	70
c) <u>Biological Conditions: The Standing Crop.</u>	73
i) The larger aquatic vegetation.	73
ii) Chemical composition of the dominant plants.	73
iii) The Phytoplankton.	76
A list of the algae recorded in the reservoir	76
Percentage composition of the different groups	78
Quantitative grouping of the organisms	79
Periodicity of the most dominant species	79
iv) The Zoo-plankton	80
A list of the zoo-plankton organisms	80
Percentage composition of the groups	83
Quantitative grouping of the organisms	84
Constant forms	86
Periodicity of the dominant organisms.	86
Quantitative estimation of plankton in the surface and bottom layers.	88
Summary of biological conditions	89
d) <u>Bacteriological Conditions</u>	90
e) <u>Discussion of results</u>	91
Temperature and biological production	91
Reasons for the poor development of Phytoplankton in the Ajwa Reservoir	93
Limnological role of the higher submerged aquatics in the reservoir.	96
Dominance of Zoo-plankton organisms.	100
The character of the raw water reaching the Water Works at Nimeta for purification	101
Conclusion	102
f) <u>References</u>	103
g) <u>Appendix : Tabular Statements.</u>	109

	Page No.
5. Section B: <u>BIOLOGY OF THE NIMETA WATER WORKS.</u> . . .	134-189
Preface	134
I. Introduction	135
II. Methods of Collection of Biological samples and the numerical estimation of the micro-organisms.	136
III. <u>Biology of the Nimeta Water Works.</u>	138
a) Raw Water Conduits	139
b) Raw water inlet at the Water Works	140
c) Raw Water Channels carrying alum treated and flocculated water to the sedimentation basins	147
d) Sedimentation basins	148
e) Filtered Water	150
IV. <u>Discussion of results.</u>	154
a) Occurrence of Zoo-plankton organisms in the filtrates from the six rapid sand filters. .	154
b) Significance of the occurrence of nematodes.	156
c) Causes for the penetration of zoo-plankton organisms	159
d) Control of filtrate turbidity.	165
e) Remedial measures.	167
V. <u>Summary.</u>	169
VI. <u>References</u>	170
VII. <u>Appendix: Tabular Statements</u>	172
