Office of the Provincial Primary Education

Dear Sir,

I am registered as a doctoral student of the M.S. University of Baroda for the degree of Ph.D. in Education under Professor M.S. Yadav's guidance. I have undertaken a research study on 'Identification of Administrative Competencies of Primary School Administrators in Thailand and Development of a Set of Criteria for Their Selection'.

You have been selected as an expert for this purpose. You are requested to judge the weightage of each constituent to be included in the selection criteria. For this purpose I am sending two documents:

1. List of components with the weightage assigned to them in present selection criteria and the research findings for the present study showing these components' relationships with

administrative abilities and administrative behaviours.

2. The list of identified components in the present study.

Kindly go through the research findings, examine the weightage given to the constituents in the present criteria in the light of research findings. Now, observe closely the identified constituents and assign them weightage out of the total weightage of 100 as per your judgement keeping in view the research findings. You can also include any other component if you feel is very relevant and not included in the list. However, total weightage for all the constituents must remain hundred only.

Please treat this as professional work and give your frank and judicious judgement.

Yours Sincerely,

Sombat Noparak
