

LISTS OF TABLES AND ILLUSTRATIONS

LIST OF TABLES

Table No.	Description	Page
1-1	Disease resistant selections using in vitro cultures	7
2-1	Murashige and Skoog's (1962) medium	28
2-2	Nitsch's (1969) medium	29
2-3	Potato-sucrose-agar medium (Johnson and Booth, 1983)	30
2-4	Modified Richard's Solution	31
3-1	Inoculum density and influence of the pathogen <u>F. oxysporum</u> on the host <u>N. tabacum</u> var. A2	54
3-2	Response of tobacco varieties to fungal inoculation	57
3-3	Response of tobacco varieties to GI50 concentration (30%) of the CF	60
3-4	Computation of x and y varieties for comparisons of paired observations	63
4-1	MS-MR-CF media combinations	80
4-2	Fractions obtained from Sephadex G25, their absorption and toxicity	99
4-3	Morphological characters of Fusarium culture on various sucrose level media	102
5-1	Evaluation of LD50 regenerants in the leaf disk bioassay.	131
5-2	Evaluation of haploids in the leaf disk bioassay for disease resistance	135
5-3	Correlation of leaf-disk-assay and wilt index on the LD50 selected tobacco	137
5-4	Effect of different conc. of CF on anther culture in presence and absence of activated charcoal.	142
