

LIST OF TABLES

| Table No | Title | Page No |
|----------|--|---------|
| 2.1 | Better nutrition helps achieve Millennium Development Goals | 16 |
| 2.2 | Prevalence of IDA in adolescent girls of India | 21 |
| 2.3 | Prevalence in Vadodara among urban poor adolescent girls | 22 |
| 2.4 | Diagnostic criteria for iron deficiency | 23 |
| 2.5 | Impact of iron folic acid supplementation on hemoglobin levels | 36 |
| 2.6 | Impact of iron folic acid supplementation on growth and appetite | 40 |
| 2.7 | Impact of daily iron folic acid supplementation on cognition and physical work capacity | 43 |
| 3.1 | Study indicators and tools for data collection | 54 |
| 3.2 | Errors allowed, time limit and scoring for the seven mazes | 59 |
| 4.1.1 | Socio-economic profile of the schoolgirls | 71 |
| 4.1.2 | Mean hemoglobin and prevalence of anemia in the girls | 72 |
| 4.1.3 | Mean height, weight and BMI of the girls compared with reference standards | 74 |
| 4.1.4 | Morbidity profile of the present LIG subjects | 78 |
| 4.1.5 | Mean food intake (% RDA) of the younger and older girls | 79 |
| 4.1.6 | Frequency of intake of selected iron and vitamin c rich foods | 81 |
| 4.1.7 | Quantity of intake of selected iron and vitamin C rich foods | 81 |
| 4.1.8 | Mean nutrient intake of the younger and older girls | 83 |
| 4.1.9 | Major perceptions of girls regarding anemia: its causes, consequences and treatment | 88 |
| 4.1.10 | Cognitive function test scores of the young primary school girls: LIG and HIG girls | 93 |
| 4.1.11 | Cognition test scores of the anemic and non-anemic girls | 95 |
| 4.1.12 | Cognition test scores of the anemic and non-anemic girls who were undernourished | 95 |
| 4.1.13 | Physical work capacity of the young primary school girls | 98 |
| 4.1.14 | Physical work capacity of the anemic and non-anemic girls | 99 |
| 4.1.15 | PWC of the anemic and non-anemic girls who were wellnourished and undernourished | 100 |
| 4.2.1 | Mean compliance with iron folic acid tablets among the school girls in various intervention groups | 103 |
| 4.3.1 | Change in mean hemoglobin levels of the girls after the intervention | 114 |
| 4.3.2 | Change in mean hemoglobin levels in the school girls after the intervention: level of significance between the groups | 114 |
| 4.3.3 | Mean hemoglobin change in girls with good compliance and poor compliance with iron folic acid tablets after the intervention | 116 |
| 4.3.4 | Change in mean hemoglobin levels of initially anemic girls after the intervention | 116 |
| 4.3.5 | Change in mean hemoglobin levels in initially anemic girls after the intervention: level of significance between the groups | 117 |
| 4.3.6 | Proportion of girls showing various levels of hemoglobin increments in experimental and control groups after intervention | 119 |
| 4.3.7 | Change in prevalence of anemia in the experimental and control groups after the intervention | 121 |
| 4.3.8 | Prevalence of anemia in girls with good compliance and poor compliance of iron folic acid tablets after the intervention | 123 |

| Table No | Title | Page No |
|-----------------|---|----------------|
| 4.3.9 | Shift in severity of anemia in girls after the intervention | 123 |
| 4.3.10 | Change in mean height for age, weight for age and body mass index among the school girls after the intervention | 131 |
| 4.3.11 | Change in mean height, weight and BMI in the school girls after the intervention: level of significance between the groups | 132 |
| 4.3.12 | Mean change in BMI (% Must et al) in the school girls after the intervention | 133 |
| 4.3.13 | Mean change in BMI (% Must et al) in the school girls after the intervention: level of significance between the groups | 135 |
| 4.3.14 | Mean change in BMI (% CDC) in the school girls after the intervention | 135 |
| 4.3.15 | Mean change in anthropometric indices in initially anemic girls after the intervention | 138 |
| 4.3.16 | Mean change in anthropometric indices: Height and BMI in initially anemic girls: level of significance between the groups | 139 |
| 4.3.17 | Percentage girls undernourished after the interventions | 143 |
| 4.3.18 | Benefits experienced by the girls: In their own words | 154 |
| 4.3.19 | Mean change in the macro nutrient intakes as % RDA of the girls before and after intervention | 155 |
| 4.3.20 | Mean change in mineral and vitamin intakes as % RDA of the girls | 158 |
| 4.3.21 | Mean change in cognitive test scores in the school girls after the intervention: level of significance between the groups | 165 |
| 4.3.22 | Mean change in cognitive test scores in the younger and older school girls after the intervention | 167 |
| 4.3.23 | Mean change in cognition test with good compliance: level of significance | 169 |
| 4.3.24 | Mean change in cognition test scores in girls who gained ≥ 1 g/dl vs. < 1 g/dl hemoglobin after the intervention | 171 |
| 4.3.25 | Change in mean number of steps climbed and RT (in min) after MHST after the intervention: level of significance between the groups | 181 |
| 4.3.26 | Mean Change in number of steps climbed and recovery time (in min) after MHST in younger and older school girls after the intervention | 182 |
| 4.3.27 | Mean change in steps climbed and reaction time (in min) after MHST with good compliance | 183 |
| 4.3.28 | Mean change in steps climbed and recovery time (in min) in who gained ≥ 1 g/dl vs. < 1 g/dl Hb after the intervention | 185 |
| 4.3.29 | Mean change in steps climbed and recovery time (in min) in girls who gained ≥ 1 g/dl vs. < 1 g/dl hb in good compliance group | 188 |
| 5.1 | Study indicators and tools for data collection | 198 |
| 5.2 | Prevalence of anemia, stunting and undernutrition among the primary school girls | 200 |
| 5.3 | Deleterious effect of anemia on the school girls | 202 |
| 5.4 | Impact on hemoglobin levels after the intervention | 203 |
| 5.5 | Impact on Height-for-Age and BMI after the intervention | 205 |
| 5.6 | Mean change in cognitive test scores in the school girls after the intervention | 208 |
| 5.7 | Change in mean number of steps climbed and RT (in min) after MHST after the intervention | 201 |
