

LIST OF TABLES

Tables	Title	Page No.
Chapter 1	Introduction	
1.1	Permissible Limits of Different Metal Ions for Potable Water (in mg/L)	38
Chapter 2	Nanotube cleaning, functionalization, characterization, metal removal and adsorption isotherm studies	
2.1	% removal of metal ions with time for unfunctionalized nanotubes	70
2.2	% removal of metal ions with time for acylated nanotubes	71
2.3	% removal of metal ions with time for amide functionalized nanotubes	72
2.4	% removal of metal ions with time for azide functionalized nanotubes	73
2.5	Comparative study of different MWNTs	74
2.6	Values of $\ln(1-U_t)$ for unfunctionalized nanotubes at various times	75
2.7	Values of $\ln(1-U_t)$ for acylated nanotubes at various times	77
2.8	Values of $\ln(1-U_t)$ for amide functionalized nanotubes at various times	78
2.9	Values of $\ln(1-U_t)$ for azide functionalized nanotubes at various times	79
2.10	Comparative study of different MWNTs	80
2.11	% Removal of metal ions with dosage of functionalized nanotubes	84
2.12	Showing X_e , Q_e , C_e , $1/X_e$, $1/Q_e$, $1/C_e$, $\log Q_e$, $\log C_e$ for different initial concentrations of Cr+6 solution when their adsorption was studied onto amide CNTs, to study Langmuir and Freundlich isotherms	86
2.13	Showing X_e , Q_e , C_e , $1/X_e$, $1/Q_e$, $1/C_e$, $\log Q_e$, $\log C_e$ for different initial concentrations of Cr+6 solution when their adsorption was studied onto azide CNTs, to study Langmuir and Freundlich isotherms	87
2.14	The regression equations parameters Q_0 , K , R^2 and $1/n$ for functionalized CNTs	92
Chapter 3	Comparative study of surface cleaning and modification of MWNT's using various oxidizing agents	
3.1	ID/IG ratios for differently oxidized MWNT's samples	110
3.2	Carbonyl group concentration for differently oxidized MWNT's samples	112

Chapter 4 Preparation of MWNT/PSf composite membranes and its effect on metal removal

4.1	Variation of the pore size with amount of amide functionalized CNT's	134
4.2	Variation of the smallest pore diameter (micron) and required pressure (MPa) with weight % of CNT's	135
4.3	Values of Zeta potential developed at the surface of PSf/ % carboxylated CNT composite membranes when in contact with an electrolyte solution	137
4.4	Values of Zeta potential developed at the surface of PSf/ % amide functionalized CNT composite membranes when in contact with an electrolyte solution	138
4.5	Permeate flow for different membranes at different pressures	140
4.6	Removal studies of metal ions at pH 2.6 for amide functionalized MWCNT/PSf. at pressure of 0.49MPa and 0.882MPa	143
4.7	Removal studies of metal ions at pH 2.6 for azide functionalized MWCNT/PSf. at pressure of 0.49MPa and 0.882MPa	144
4.8	Removal studies of toxic metal ions at pH 2.6 for oxidized MWCNT/PSf at pressure of 0.49MPa	149
4.9	Removal studies of toxic metal ions at pH 2.6 for amide functionalized MWCNT/PSf at pressure of 0.49MPa	150
4.10	Removal studies of toxic metal ions at pH 2.6 for azide functionalized MWCNT/PSf at pressure of 0.49MPa	151

Chapter 5 ATRP using a Novel Initiator :Acetyl Chloride/Acylated Nanotubes

5.1	Various sets performed to obtain polymers	161
5.2	% conversions, weight average molecular weights and polydispersities for different sets where Monomer(M) = MMA (methyl-methacrylate), Catalyst(C) = CuCl, Ligand(L) = 2,2' bipyridyl, Initiator(I) = acetyl chloride, Surfactant= Brij 98, Solvent = water	180
5.3	Kinetic study of ATRP of PMMA at 60°C using acetyl chloride as initiator	184
5.4	Kinetic study of ATRP of PMMA at low surfactant concentration (PMLS) using acetyl chloride as initiator	187
5.5	Kinetic study of ATRP of PS at room temperature using acetyl chloride as initiator	190
5.6	Kinetic study of ATRP of PS at high temperature (60°C) using acetyl chloride as initiator	191
