

Acknowledgements

First and foremost, I would like to express my heartfelt gratitude to my supervisor Dr. B. S Chakrabarty for his guidance and support he has given me. I would also like to thank him for his patience, kindness and encouragement, particularly on occasions when my determination was stumbling.

I would like to extend a special thank to Dr Arun Anand for working side by side with me. His help has been priceless, and without it this project would not have been possible. It has been a real pleasure to work with someone with such high spirits and so tolerant with me.

I am eternally indebted to Prof. C.S Narayanmurthy for allowing me to join him. Gratitude also goes to the Head of Department Prof Arun Pratap for his encouragement and allowing me to use all facilities.

I would also like to thank Dr Jignesh Pandya who regularly assists me in the laboratory and his commitment to help me in editing my chapters.

My thanks go to Dr Avani Ummat for her support, and for forcing me to overcome my laziness and get some work done. I'd like to thank Dr Amit Patel Mechanical Department who gave considerable amount of his time for giving ideas during our regular discussions.

My biggest gratitude and appreciation goes to the major contributors to this endeavour by far for his unfailing support - my brother Francis, "thank you for always loving me since I was small, thank you for understanding me as nobody else does", to my parents: expressing my gratitude in words is not possible. If I was in a position to tackle confidently all the challenges which I faced with, then that is thanks to them. This extends to Professor George for your constants prayers and teaching me how to be strong spiritually.

My very sincere and special thanks to Mr. Bimal Solankibhai for his warm hospitality and spending many Sunday along with his family. I'm also very grateful to him, a never-ending source of new ideas, for his enthusiasm and the trust he has shown in me. I also would like to thank Mr. Manubhai and his wife for her motherly caring to me, their sweet children especially Dr Rinku and Cheetal. Without forgetting to thank Nishant's family especially his sweet mother who has been with us as mother in all the years, I love her management skills. I doubt I'll ever become such a good host as you are! Because of them, I had never felt home-sick in Baroda.

I'd also like to thank those who supported me throughout these years. There are so many of them that I just couldn't list everybody but they know who they are. Thank you all so much for believing in me, this thesis is a victory for them as much as it is for me. The working staff in the Department of Applied Physics deserves a big thank-you for always providing everything that I need.

And I owe much more than a simple thank-you to those who have been closest to me in these years,(particularly friends like Robert Kokoi, Emambet, Nishant and Snehal sir) with whom I shared numerous memorable moments, many joys and also a few sorrows.

Jack Kihiko
