

Table of Contents

No.	Title	Page No.
Chapter 1	Introduction	1-75
1.1	Cell death	1
1.1.1	Necrosis	1
1.1.2	Programmed cell death	1
1.1.2.1	Type I cell death or Apoptosis	2
1.1.2.2	Type II cell death or Autophagy	10
1.1.2.3	Type III cell death or Nonapoptotic cell death	12
1.2	Main proteins in Paraptosis	20
1.2.1	Poly(ADP-Ribose) Polymerase (PARP)	20
1.2.2	Poly (ADP-ribose) glycohydrolase (PARG)	32
1.2.3	Apoptosis Inducing Factor (AIF)	35
1.3	<i>Dictyostelium discoideum</i>	37
1.3.1	Molecular aspects of <i>D. discoideum</i> development	41
1.3.2	<i>D. discoideum</i> as a model organism	47
1.3.3	<i>D. discoideum</i> and programmed cell death	50
	References	52
	Objectives	76
Chapter 2	Materials and Methods	77-92
Chapter 3	Role of Poly(ADP-Ribose) Polymerase (PARP) in oxidative stress induced cell death in <i>D. discoideum</i>	93-128
3.1	Introduction	93
3.2	Results	94
3.2.1	Induction of cell death in <i>D. discoideum</i> cells by oxidative stress	94
3.2.1.1	Intracellular build-up of oxidative stress in <i>D. discoideum</i> cells	94
3.2.1.2	Induction of cell death in <i>D. discoideum</i> by exogenous addition of cumene H ₂ O ₂	95
3.2.2	Measurement of Reactive Oxygen Species (ROS)	97

3.2.3	Oxidative stress mediated DNA damage	97
3.2.4	PARP activation induced by oxidative stress	98
3.2.5	PARP inhibition delays oxidative stress induced cell death	98
3.2.6	PARP activation leads to adenine and pyridine nucleotides depletion	104
3.2.7	Mitochondrial membrane potential (MMP) changes under oxidative stress	105
3.2.8	AIF translocation is downstream to PARP activation	108
3.2.9	Monitoring the release of cytochrome c from mitochondria	108
3.2.10	HA induced apoptosis leads to large scale DNA fragmentation	110
3.2.11	Oxidative stress induced cell death in <i>D. discoideum</i> is caspase independent	111
3.2.12	Effect of broad caspase inhibitor on MMP changes and cell death	111
3.2.13	Characterization of paraptotic vesicles	113
3.2.14	Effect of MEK inhibition on cell death	114
3.3	Discussion	115
3.4	References	123
Chapter 4 Role of Poly(ADP-ribose) glycohydrolase (PARG) in oxidative stress induced cell death in <i>D. discoideum</i>		129-143
4.1	Introduction	129
4.2	Results	130
4.2.1	Dose dependent effect of gallotannin on <i>D. discoideum</i> cell death	130
4.2.2	Effect of PARG inhibition on PARP activation under oxidative stress in <i>D. discoideum</i>	132
4.2.3	Assessment of cell death by AnnexinV-FITC/PI dual staining	134
4.2.4	Effect of PARG inhibition on oxidative stress induced MMP changes	135
4.2.5	Effect of PARG inhibitor gallotannin on AIF translocation during HA induced cell death	137

4.2.6	Effect of oxidative stress on NAD ⁺ levels in cells	138
4.3	Discussion	139
4.4	References	141
Chapter 5 Proteases involved in cell dismantling during oxidative stress induced paraptosis and necrosis in <i>D. discoideum</i>		144-155
5.1	Introduction	144
5.2	Results	145
5.2.1	Effect of Protease Inhibitor Cocktail (PIC) on paraptosis	145
5.2.1.1	Proteases involved in <i>D. discoideum</i> paraptotic cell death	145
5.2.1.2	Effect of calpain and cathepsin D inhibition on MMP changes during oxidative stress induced paraptotic cell death	145
5.2.1.3	Effect of calpain and cathepsin D inhibition on plasma membrane integrity as monitored by PS-PI dual staining	147
5.2.1.4	Effect of calpain inhibition on AIF translocation	148
5.2.1.5	Paraptotic Vesicle formation in presence of calpain and cathepsin D inhibitor	148
5.2.1.6	Calpain activity during paraptotic cell death	150
5.2.2	Proteases involved during oxidative stress induced necrotic cell death	150
5.2.2.1	Effect of Protease Inhibitor Cocktail (PIC) on necrosis	150
5.2.2.2	Effect of calpain and cathepsin D inhibition on MMP changes during oxidative stress induced necrotic cell death	151
5.2.2.3	Calpain activity during necrosis	151
5.3	Discussion	152
5.4	References	154
Chapter 6 Role of poly (ADP-ribose) polymerase (PARP) and effect of glutathione and cAMP in oxidative stress induced changes in <i>D. discoideum</i> growth and development		156-177
6.1	Introduction	156

6.2	Results	158
6.2.1	<i>D. discoideum</i> growth under oxidative stress	158
6.2.2	<i>D. discoideum</i> development under oxidative stress	159
6.2.3	Effect of glutathione on oxidative stress induced <i>D. discoideum</i> development	160
6.2.4	Continuous presence of glutathione on <i>D. discoideum</i> development	161
6.2.5	Partial rescue of oxidative stress induced changes in growth by GSH	161
6.2.6	Rescue of oxidative stress induced developmental changes by GSH	162
6.2.7	PARP inhibition during oxidative stress induced growth changes in <i>D. discoideum</i>	163
6.2.8	Role of PARP during <i>D. discoideum</i> development	163
6.2.9	PARP involvement during oxidative stress induced developmental changes in <i>D. discoideum</i>	164
6.2.10	PARP inhibition restored spore revival delayed due to oxidative stress	165
6.2.11	Effect of cAMP on oxidative stress induced <i>D. discoideum</i> development	167
6.2.12	cAMP levels in oxidative stress induced <i>D. discoideum</i>	168
6.2.13	Nitric oxide levels during oxidative stress in <i>D. discoideum</i>	169
6.3	Discussion	169
6.4	References	174
Chapter 7 Down-regulation of PARP by antisense and its effect on oxidative stress induced cell death in <i>D. discoideum</i>		178-197
7.1	Introduction	178
7.1.1	Strategy for targeted down-regulation of <i>adprt1A</i> encoding PARP	178
7.2	Results	182
7.2.1	Standardization of plasmid DNA transformation in <i>D. discoideum</i>	182
7.2.2	Cloning of PARP antisense	183

7.2.3	Functional characterization of PARP antisense	186
7.2.4	Effect of PARP down-regulation on growth and development of <i>D. discoideum</i>	187
7.2.5	Effect of constitutive PARP down-regulation on oxidative stress induced cell death	188
7.3	Discussion	191
7.4	References	195

Conclusion	198-203
