

C O N T E N T S

CHAPTER		PAGE
I	INTRODUCTION	1-3
II	LUMINESCENCE	4
	A. General aspects of Luminescence	4-8
	(i) Types of Luminescence	
	(ii) Fluorescence and Phosphorescence.	
	B. Theories of Luminescence	8-12
	(i) Configuration Co-ordinate Model	
	(ii) Band Theory Model	
	C. Effect of Temperature on Luminescence	12-14
	D. Applications of Luminescence	14-21
	References	
III	POLYMERS	22
	A. Introduction	22-24
	(i) Brief History	
	(ii) Polymerization	
	B. Classification of Polymers	24-34
	(i) Composition and Structure	
	(ii) Mechanism	
	(iii) Linear, Branched and Crosslinked Polymers.	
	(iv) Organic, Elemento-Organic and In-organic Polymers.	
	C. Coumarins	34-37
	(i) Derivatives of Coumarin	
	(ii) Reactivity of Coumarins	
	D. Preparation of Monomer and Its Co-polymers.	38-40
	(i) Synthesis of Monomer	
	(ii) Synthesis of Polymers	
	References	

CHAPTER		PAGE
IV	EXPERIMENTAL	41
	A. Preparation of Specimens	41-43
	(i) As received Specimens	
	a. Monomer	
	b. Polymers	
	(ii) Mechanically Deformed specimens	
	(iii) Thermally Treated Specimens	
	B. Instrumentation	43-49
	(i) Description	
	a. Principles of Operation	
	b. Optical Unit	
	c. Photomultiplier Microphotometer Unit.	
	(ii) Operating Procedure for Recording the Spectra.	
	C. Solution Viscosity and Molecular Size	49-52
	(i) Experimental Method.	
	(ii) Precautions	
	References	
V	RESULTS AND DISCUSSION	53
	A. Results	53-60
	B. Discussion	61
	(i) 320 nm Emission Band	62-65
	(ii) 420 nm Emission Band	65-69
	(iii) 480 nm Emission Band	69-72
	(iv) 520 nm Emission Band	73-75
	C. Emission Spectra - Electronic States and transitions.	75-77
	References	
	CONCLUSIONS	78-80
