

LIST OF TABLES :

1.1	Consumption of petroleum products in India	1
1.2	Lube-base stock production capacity in India	2
2.3	Lube-base stock potential of few crudes	4
1.4	Operating parameters of MEK dewaxing	13
1.5	Effect of solvent dilution in filtration rate	17
1.6	Role of hydrocarbon type in flow properties of lube oil	19
2.1	Hydrocarbon assimilating microorganisms	34
2.2	Summary of production capacity of SCP from hydrocarbon	44
2.3	Growth parameters of yeasts on hydrocarbons	46
2.4	Proximate composition of Bacteria and yeast used for SCP production	54
2.5	Amino acid profile of yeast and other selected stuffs	56
2.6	Recommended standards for SCP from hydrocarbons	60
2.7	Physical properties of the vacuum distillates	63
3.1.2	Composition of medium	64
3.1.4	Fermentor dimensions	68
4.1.1	Screening of yeast strains	85
4.2.1	Effect of temperature on sp. growth rate	97
4.2.2	Determination of activation energy	98
4.2.3	Effect of temperature on yield and pour pt.	99
4.2.4	Effect of pH on sp. growth rate	105
4.2.6	Effect of oil conc. on dewaxing	110
4.3.1	Dewaxing of vacuum distillates by batch operation	118
4.3.2	Yield of biomass on vacuum distillate	119
4.3.3	Yield of dewaxed oil	120
4.3.4	Dewaxing by semicontinuous operation	122
4.3.5	Batch and semi-continuous operation	122
4.4.2	Oxygen transfer capacity at different aeration rate	134
4.4.3	K_L values at different aeration rate	134
4.4.4	Impellers Reynolds number of fermentors	138
4.4.5	Calculation of net power per unit volume (P/V)	141

4.4.6	Effect of P/V on sp. growth rate	142
4.4.7	Comparison of scale up data	151
4.5.1	Effect of solvent composition on oil recovery	157
4.5.2	Effect of solvent / emulsion ratio on recovery	158
4.5.3	Composition of different streams in the leaching operation	160
4.6.1	Properties of the microbial and solvent dewaxed oil	167
4.6.2	Changes of hydrocarbon composition	168
4.6.3	Changes in individual hydrocarbon types in sample 'A' due to microbial dewaxing	169
4.6.4	Composition of SCP from different petroleum fractions	170
