

## LIST OF TABLES

Table No.	Title	Page No.
<b>Table 1</b>	Major stores of carbon on the Earth.....	9
<b>Table 2</b>	An overview of the magnitude of global carbon stocks in terrestrial systems (vegetation and soil carbon pools) down to a depth of 1 m.....	17
<b>Table 3</b>	Number of districts selected, mean annual precipitation (MAP, mm yr <sup>-1</sup> ) of past 50 years, number of plots (250 m <sup>2</sup> ) and quadrats (0.1 ha) laid down across all RFZs.....	33
<b>Table 4</b>	Mean values of density (trees ha <sup>-1</sup> ), diversity (tree species ha <sup>-1</sup> ) of trees, and total number of trees enumerated across the four rainfall zones (RFZs).....	54
<b>Table 5</b>	Mean AGB (Mg ha <sup>-1</sup> ) values for the plots with different NDVI values across the four RFZs.....	58
<b>Table 6</b>	Measured leaf characteristics for selected species for litter decomposition experiment.....	67
<b>Table 7</b>	Regression equations and correlation values (r) of mean values of the observed parameters with mean annual precipitation (MAP, mm yr <sup>-1</sup> ) across four rainfall zones (RFZs) (n = 4, P<0.05).....	75

## APPENDIX

Table No.	Title	Page No.
<b>Table A1</b>	Tree species across four rainfall zones (RFZs).....	<b>96</b>
<b>Table A2</b>	Distribution of trees across the four rainfall zones (RFZs). Frequency classes were made according to diameter at breast height (DBH, cm) range of trees.....	<b>99</b>
<b>Table A3</b>	$R^2$ values of correlation between $k$ values at different intervals and leaf traits.....	<b>99</b>

## LIST OF FIGURES

Figure No.	Title	Page No.
<b>Figure 1</b>	Graphical representation of the movement of carbon between land, atmosphere, and oceans.....	5
<b>Figure 2</b>	Global Flow of Carbon.....	6
<b>Figure 3</b>	Mean Global Temperature (1 °F = -17.22 °C) and Global CO <sub>2</sub> levels.....	8
<b>Figure 4</b>	Emissions of carbon dioxide by human activities have been growing steadily since the onset of the industrial revolution.....	12
<b>Figure 5</b>	Separating Human and Natural Influences on Climate...	13
<b>Figure 6</b>	Global forest site data for above-ground living biomass carbon (t C ha <sup>-1</sup> ) (A), and total biomass carbon (t C ha <sup>-1</sup> ) (B), in relation to mean annual temperature and mean annual precipitation.....	20
<b>Figure 7</b>	22 selected districts (highlighted with yellow colour) of Gujarat state (INDIA) as on 2009.....	28
<b>Figure 8</b>	A world map illustrating global classification of forests by FAO.....	29
<b>Figure 9</b>	Figure illustrates how natural forest vegetation has been classified across India.....	32
<b>Figure 10</b>	Map of study area (Gujarat) showing distribution of 95 plots (blue bullet points) and mean annual precipitation (MAP, mm yr <sup>-1</sup> ) of each RFZ.....	33
<b>Figure 11</b>	Plot outline (250 m <sup>2</sup> ) and four sub-plots (quadrats) of 0.1 ha (31.62 m <sup>2</sup> ).....	35
<b>Figure 12</b>	Pictures of study area across RFZ-1 showing vegetation spread, tagged trees.....	37

<b>Figure 13</b>	Pictures of study area across RFZ–2 showing vegetation spread, tagged trees.....	<b>38</b>
<b>Figure 14</b>	Pictures of study area across RFZ–3 showing vegetation spread, tagged trees.....	<b>39</b>
<b>Figure 15</b>	Pictures of study area across RFZ–4 showing vegetation spread, tagged trees.....	<b>40</b>
<b>Figure 16</b>	Percentage variation in annual rainfall received by each RFZ from MAP (50 year mean) during past decade across RFZs 1–4.....	<b>52</b>
<b>Figure 17</b>	Mean diameter at breast height (DBH, cm) and mean stand height (m) of trees across RFZs 1–4.....	<b>55</b>
<b>Figure 18</b>	Mean above-ground biomass (AGB, Mg ha <sup>-1</sup> ) for all the rainfall zones (RFZ).....	<b>57</b>
<b>Figure 19</b>	Mean pH values of soil for each rainfall zone (RFZ).....	<b>59</b>
<b>Figure 20</b>	Soil particle fractions (particle size distribution) for each rainfall zone (RFZ).....	<b>60</b>
<b>Figure 21</b>	Soil particle size distribution (mean values) across the RFZ – 1 to 4 (red, blue, green, and yellow points respectively).....	<b>60</b>
<b>Figure 22</b>	Mean soil organic carbon (SOC, Mg ha <sup>-1</sup> ) for different depths (top 0–5, 5–10, 10–15, 15–20, and bottom 20–25 cm) in soil for each rainfall zone (RFZ).....	<b>61</b>
<b>Figure 23</b>	Mean soil organic carbon (SOC, Mg ha <sup>-1</sup> ) up to 25 cm depth in soil in each rainfall zone (RFZ).....	<b>63</b>
<b>Figure 24</b>	Relationship between SOC <sub>25</sub> (Soil organic carbon, SOC at 25 cm soil depth) and SOC <sub>100</sub> (SOC at 100 cm soil depth) across four rainfall zones (RFZs) (n = 95).....	<b>63</b>
<b>Figure 25</b>	Mean microbial biomass carbon (MBC, Mg ha <sup>-1</sup> ) for different depths (top 0–5, 5–10, 10–15, 15–20, and bottom 20–25 cm) in soil in each rainfall zone (RFZ).....	<b>65</b>
<b>Figure 26</b>	Mean microbial biomass carbon (MBC, Mg ha <sup>-1</sup> ) up to 25 cm depth in soil in each rainfall zone (RFZ).....	<b>65</b>

<b>Figure 27</b>	Decomposition pattern for Nonstructural components (a) and Holocellulose (b) in all the species.....	<b>68</b>
<b>Figure 28</b>	Weight loss of whole litter mass (a), structural components (b) and lignin (c) during decomposition (from 0–270 days, Vadodara site) of selected plant species. (Values in parenthesis indicate range of standard deviation from the mean).....	<b>70</b>
<b>Figure 29</b>	$k$ values ( $\text{g g}^{-1} \text{yr}^{-1}$ ) of all the species at different intervals (a) and a representative of trees, shrubs and herbs (b).....	<b>71</b>
<b>Figure 30</b>	Changes in MBC levels (%) up to 270 days.	<b>72</b>
<b>Figure 31</b>	Relationship between above ground biomass (AGB, $\text{Mg ha}^{-1}$ ) and soil organic carbon (SOC, $\text{Mg ha}^{-1}$ ) up to 25 cm soil depth, $n=95$ across the rainfall zones (RFZs).....	<b>73</b>
<b>Figure 32</b>	Relationship between soil organic carbon (SOC, $\text{Mg ha}^{-1}$ ) and soil microbial biomass carbon (MBC, $\text{Mg ha}^{-1}$ ) up to 25 cm soil depth, $n=95$ across the rainfall zones (RFZs).....	<b>73</b>
<b>Figure 33</b>	Relationship between aboveground biomass (AGB) and soil organic carbon (SOC, up to 25 cm soil depth) across four rainfall zones (RFZs), a) RFZ–1 ( $n = 22$ ), b) RFZ–2 ( $n = 31$ ), c) RFZ–3 ( $n = 20$ ), and d) RFZ–4 ( $n = 22$ ).....	<b>74</b>
<b>Figure 34</b>	Relationship between soil organic carbon (SOC) and microbial biomass carbon (MBC) across four rainfall zones (RFZs) for, a) 0–5 cm soil depth ( $n = 95$ ), and b) 20–25 cm soil depth ( $n = 95$ ).....	<b>75</b>
