

LIST OF TABLES

	Page No.
TABLE - 1 Placement of the Euphorbiaceae by a few taxonomists	3
" - 2 A few taxonomic treatments of the family Euphorbiaceae	6
" - 3 Evolution of some flavonoid characters in angiosperms according to Harborne	11
" - 4 Different character states for angiosperm flavonoids	12
" - 5 Previous chemical work	21
" - 6 Details of voucher specimens deposited in the herbarium Dept. of Botany, M.S.U. Baroda	33
" - 7 Groupings of genera on the basis of occurrence of Flavonoids, Alkaloids and Saponins	42
" - 8 Distribution of flavones, flavonols, glycoflavones, alkaloids, tannins, iridoids, saponins & proanthocyanins in 67 members of Euphorbiaceae	44
" - 9 Arrangement of Euphorbiaceae members on the basis of presence or absence of flavonoid compounds	49

TABLE - 10	Arrangement of Euphorbiaceae members on the basis of flavonol containing Flavone containing & both flavonol & Flavone containing	54
" - 11	Arrangement of Euphorbiaceae members on the basis of Quercetin containing, Kaempferol containing, & Apigenin & Luteolin containing	59
" - 12	Distribution of various phenolic acids in 67 members of the Euphorbiaceae	63
" - 13	Arrangement of genus <u>Euphorbia</u> on the basis of chemical constituents	69
" - 14	Sectional and subsectional arrangement of genus <u>Jatropha</u>	72
" - 15	Showing the characters and their apomorphic and plesiomorphic states	88
" - 16	The distribution of various characters in 29 genera of the Euphorbiaceae	89
