

LIST OF TABLES

<u>Table No.</u>		<u>Page No.</u>
1.	"Phosphatidylinositol effect" in different tissues.	11 - 14
2.	"Polyphosphoinositide effect" in different tissues.	16 - 17
3.	Distribution of phosphoinositides in different tissues of the rat.	26
4.	Incorporation of $^{32}\text{P}_1$ into phosphoinositides of different tissues.	27
5.	Phosphoinositide content of rat/rabbit kidney.	29
6.	Polyphosphoinositide levels in developing rat brain - A comparison of reported values.	31 - 32
7.	Distribution of Polyphosphoinositides in rat brain regions.	35
8.	Polyphosphoinositides in the central and peripheral nervous system of different species.	36
9.	Distribution of phosphoinositides and PolyPI phosphohydrolases in subfractions of rat brain myelin.	39
10.	Enzymes of phosphoinositide metabolism in different tissues.	43 - 44
11.	Activities of major synthesizing and catabolising enzymes of phosphoinositide metabolism in rat brain and kidney.	45 - 46

<u>Table No.</u>		<u>Page No.</u>
12.	Subcellular localization of enzymes of phosphoinositide metabolism in rat brain and kidney.	47 - 48
13.	Effect of cations on enzymes of phosphoinositide metabolism in rat brain and kidney.	49 - 50
14.	History of Polyphosphoinositide phosphomonoesterase.	62 - 63
15.	History of Polyphosphoinositide phosphodiesterase.	66 - 67
16.	Myo-inositol and Scyllo-inositol levels in different tissues of the rat.	90
17.	Effects of nutritional stress during different stages of brain development.	117 - 122
18.	Effects of pre-weaning undernutrition on the lipid composition of central nervous system.	123
19.	Composition of stock diet used for Experiment I.	145
20.	Composition of diets used for Experiments II and III.	146
21.	Composition of diets used for Experiments IV and V.	147
22.	Composition of Vitamin Mixtures.	149
23.	Composition of Salt Mixtures.	150
24.	Reagents and standards used for different estimations.	152 - 154
25.	Experimental Details	167 - 171

<u>Table No.</u>		<u>Page No.</u>
26.	Changes in the concentration of poly-phosphoinositides at different times post-mortem in 21 and 56 day old rat brains.	186
27.	Rate of decrease (nmoles/min) in the levels of polyphosphoinositides during different time-intervals post-mortem in rat brain (21 and 56 days old).	188
28.	Postulated designation, localization and role of PolyPI pools in rat brain.	190
29.	Body and brain weights at different ages in the rat.	191
30.	Polyphosphoinositides in developing rat brain.	192
31.	Polyphosphoinositide composition of developing rat brain as percent of reference value (i.e. 63 day-old rats).	194
32.	Percent increments in the content of Poly-phosphoinositide pools during different periods of development in rat brain.	195
33.	Effects of pre-weaning undernutrition on (a) the body and brain weights of rats (b) the concentration of polyphosphoinositide pools in rat brain (21 days old).	210
34.	Effect of post-weaning protein deficiency on (a) the body and brain weights of rats (b) the concentration of polyphosphoinositide pools in rat brain (63 days old).	212
35.	Effect of post-weaning nutritional rehabilitation on (a) the body and brain weights of rats (b) the concentration of polyphosphoinositide pools in brains of rats under-nourished prior to weaning (63 days old).	214

Table No.Page No.

|-----|--|-----|
| 36. | Effects of pre- and post-weaning protein undernutrition on (a) the body and brain weights of rats (b) the concentration of polyphosphoinositide pools in rat brain (63 days old). | 216 |
| 37. | Comparative effects of nutritional alterations during the pre- and post-weaning periods on the concentration of polyphosphoinositides in rat brain. | 218 |
| 38. | Effect of pre-weaning undernutrition on the incorporation of $^{32}\text{P}_1$ into PolyPI of rat brain (21 days old). | 230 |
| 39. | Effect of pre-weaning undernutrition on the incorporation of $^{32}\text{P}_1$ into polyphosphoinositides of rat brain (21 days old). | 231 |
| 40. | Effect of post-weaning protein deficiency on the total incorporation of $^{32}\text{P}_1$ into polyphosphoinositides of rat brain (63 days old). | 233 |
| 41. | Effect of post-weaning protein undernutrition on the incorporation of $^{32}\text{P}_1$ into polyphosphoinositides of rat brain (63 days old). | 234 |
| 42. | Comparative effects of pre-weaning undernutrition and post-weaning protein deficiency on the levels and incorporation of $^{32}\text{P}_1$ into polyphosphoinositide pools of rat brain. | 236 |

Table No.Page No.

|-----|--|-----------|
| 43. | Effect of pre-weaning undernutrition on (a) the body, brain stem and cerebellar weights of rats (b) the concentration of total, NFA and HFA cerebroside in rat brain regions (21 days old). | 254 |
| 44. | Effect of post-weaning protein undernutrition on (a) the body, brain stem and cerebellar weights of rats (b) the concentration of total NFA and HFA cerebroside in rat brain regions (63 days old). | 255 |
| 45. | Effect of post-weaning nutritional rehabilitation on (a) the body, brain stem and cerebellar weights of rats (b) the concentration of total, NFA and HFA cerebroside in rat brain regions (63 days old). | 256 |
| 46. | Comparative effects of nutritional alterations during the pre- and post-weaning periods on the distribution of NFA and HFA cerebroside in rat brain regions. | 257 |
| 47. | Effect of pre-weaning undernutrition on the concentration of polyphosphoinositides in rat brain regions (21 days old). | 258 - 259 |
| 48. | Effect of post-weaning protein undernutrition on the concentration of polyphosphoinositides in rat brain regions (63 days old). | 261 - 262 |
| 49. | Effect of post-weaning nutritional rehabilitation on the concentration of polyphosphoinositides in brain regions of rats undernourished prior to weaning (63 days old). | 264 - 265 |

<u>Table No.</u>		<u>Page No.</u>
50.	Comparative effects of nutritional alterations during the pre- and post-weaning periods on the post-mortem depletion of polyphosphoinositides in rat brain regions.	267
51.	Comparative effects of nutritional alterations during the pre- and post-weaning periods on the 1 min post-mortem levels of polyphosphoinositides in rat whole brain and brain regions.	268
52.	Comparative effects of nutritional alterations during the pre- and post-weaning periods on the concentration of polyphosphoinositides at 10 min post-mortem in rat brain regions.	269
53.	Summary of Experiments II and IV (Whole brain and brain regions):	270 - 273
54.	Effect of pre-weaning undernutrition on (a) the body and kidney weights of rats (b) the concentration of polyphosphoinositide pools in rat kidney (21 days old).	281
55.	Effect of post-weaning protein deficiency on (a) the body and kidney weights of rats (b) the concentrations of polyphosphoinositide pools in rat kidney (63 days old).	283
56.	Effect of post-weaning nutritional rehabilitation on (a) the body and kidney weights of rats (b) the concentration of polyphosphoinositide pools in kidneys of rats undernourished prior to weaning (63 days old).	285

|-----|--|-----|
| 57. | Effect of varying nutritional conditions
on the 1 minute post-mortem levels of PolyPI
in brain and kidney and 10 minute post-mortem
levels of PolyPI in kidney. | 287 |
|-----|--|-----|
