

LIST OF TABLES

<u>Table No.</u>		<u>Page No.</u>
1 .	Nutrient intake of different groups in the lower class.	4
1a.	Nutrient intake of different groups in the upper class.	8
2.	Weights and heights of different groups belonging to the lower class.	15
3.	Effects of dietary supplements on the weights and heights of school children.	18
4.	Incidence of clinical deficiency symptoms reported in children.	25
5.	Hemoglobin content of blood of subjects in different groups in the lower and upper classes.	34
6.	Total protein and albumin content of plasma or serum of subjects in different groups in the lower and upper classes.	39
7.	Ascorbic acid content of plasma or serum in children and adults.	46
8.	Vitamin A and carotene content of plasma or serum in children and adults.	48
9.	Calcium content of plasma or serum in children and adults.	51
10.	Phosphorus content of plasma or serum in children and adults.	52
11.	Data on urinary excretion of creatinine and nitrogen in children and adults.	56
12.	Data on urinary excretion of vitamins.	62
13.	Effect of adding leafy vegetables to a cereal legume mixture on its nutritive value to rats.	69
14.	Methods used for the chemical determinations.	78
15.	Methods used for the enzyme estimations.	80

List of Tables (Contd.)

<u>Table No.</u>	<u>Page No.</u>
16. Lunch provided at home and school.	81
16a. Composition of the lunch provided at home and school.	82
16b. Nutrient content of the lunch provided at home and school.	82
16c. Cost and nutritive value of the lunch provided at school as compared to recommended daily allowances (RDA).	83
17. Data on heights, weights and weight/height ratio of boys (7-12 years) in the lower and upper classes compared with Western Norms.	85
18. Age, Height, Weight and economic status of the school boys (7-12 years) in the lower and upper classes selected for the study.	90
19. Comparative data on the dietary intake of the families in the lower and upper classes.	92
20. Nutrient content of diets consumed by the families in the lower and upper classes.	93
21. Typical meal consumed by subjects in the different groups studied.	94
22. Conversion tables used for the estimation of raw ingredients in cooked foods.	96
23. Dietary intake of the school boys (7-12 years) in the lower and upper classes.	97
24. Nutrient intake of the school boys (7-12 years) in the lower and upper classes.	98
25. Energy requirement of the school boys (7-12 years) in the lower and upper classes.	99
26. Clinical status of the school boys (7-12 years) in the lower and upper classes.	101
26a. Clinical status of the school boys (7-12 years) in the lower and upper classes.	101b
26b. Criteria associated with deficiency of particular nutrients.	102

List of Tables (Contd.)

<u>Table No.</u>		<u>Page No.</u>
27.	Incidence of intestinal infestation in the school boys (7-12 years) in the lower and upper classes.	105
28.	Composition of blood and serum of the school boys (7-12 years) in the lower and upper classes.	108
29.	Tests of significance of differences between means of blood and serum constituents.	110
30.	Composition of urine in the school boys (7-12 years) in the lower and upper classes.	111
31.	Tests of significance of differences between means of urinary constituents.	113
32.	Biochemical status of the school boys (7-12 years) in the lower and upper classes on the basis of ICNND (1963) standards.	115
33.	Lunch provided in the programme.	120
33a.	Cereal, pulses and carotene-rich vegetables used in the lunch programme.	121
34.	Nutritive value of the lunch provided as compared to that in other programmes.	122
35.	Age, height and weight of the subjects selected for study.	124
35a.	Age distribution of the subjects.	124
36.	Dietary intake of the fed and control children during the experimental period.	125
37.	Nutrient intake of the diets consumed by the fed and the control children during the experimental period.	126
38.	Data on heights of the fed and the control children in Raipura.	129
39.	Data on weights of the fed and the control children in Raipura.	130

List of Tables (Contd.)

Page No.

Table No.

40.	Increment in weight(kg) of the fed and control children as percentages of the expected annual increments in lower and upper classes.	131
41.	Changes in the clinical status of the fed and the control children in Raipura.	133
41a.	Changes in the clinical status of the fed and the control children in Raipura.	135
42.	The incidence of intestinal infestation in the fed and control children at the start of the and end of the investigation.	136
43.	Composition of blood and serum of the fed and the control children in Raipura at the start and end of the investigation.	139
44.	Changes in blood and serum constituents in the fed and the control children during the experimental period.	141
45.	Biochemical status (blood and serum) of the fed and the control children in Raipura on the basis of ICNND (1963) standards.	143
46.	Composition of the urine of the fed children in Raipura at the start and end of the investigation.	144
47.	Biochemical status (urine) of the fed children on the basis of ICNND (1963) standards.	145
48.	Data on psychological performance in the fed and the control children in Raipura.	146.
