

LIST OF TABLES

Table No.	Title	Page No.
1.1	Environmental factors affecting energy balance	5
1.2	Prevalence of childhood obesity - Global scenario	12
1.3	Prevalence of overweight and obesity - Indian scenario	13
1.4	Prevalence of overweight and obesity in adults - Departmental studies	15
1.5	Prevalence of overweight and obesity in school children of urban Vadodara	16
1.6	Cut off values for the indicators of obesity	19
2.1	Causative factors of obesity	27
2.2	Comparative clinical and anthropometric profiles of high and low income group adolescents	39
2.3	Determinants and correlates of excess body weight or fat	43
2.4	Obesity as a risk factor for various health consequences for men and women	68
2.5	Health consequences of childhood obesity	76
2.6	Techniques for estimating body fat	79
2.7	BMI percentiles developed by various authors	83
2.8	Summary of common standards to classify overweight and obesity in children	85
2.9	Comparison of nutritional status classification according to Cole et al and must et al standards for children and adolescents	89
3.1	School wise strength of children	106
3.2	Methodology used for the study	110
4.1	School profile	121
4.2	Sex specific socioeconomic profile of the children	122
4.3	Occupational and educational background of the parents of the children	123
4.4	Anthropometric profile of the children	126

4.5	Anthropometric profile of younger and older age group children	131
4.6	Prevalence of overweight and obesity by Must et al, Cole et al and CDC standards	132
4.7	Prevalence of overweight and obesity by Agarwal standards	134
4.8	Comparison of cut off points given by Must et al, Cole et al, CDC and Agarwal standards	136
4.9	Class wise percent prevalence of overweight and obesity by Cole et al standards	138
4.10	School wise percent prevalence of undernutrition and overnutrition	140
4.11	School wise percent prevalence of overweight and obesity by Cole et al standards	142
4.12	Kappa index values for comparison of different standards	144
4.13	Measurement of agreement between Cole et al and Agarwal et al standards	144
4.14	Mean BMI and percentile values of children (12-17 years)	146
4.15	Comparison of BMI - Present vs other studies	150
4.16	Per capita income and prevalence of overweight and obesity	155
4.17	Heredity and prevalence of overweight and obesity	155
4.18	Type of diet and prevalence of overweight and obesity	156
4.19	School meal programme and prevalence of overweight and obesity	158
4.20	Mode of transport to school and prevalence of overweight and obesity in children	160
4.21	Physical activity and prevalence of overweight and obesity in children	160
4.22	Physical activities carried out by children on daily basis	162
4.23	Average time spent on TV, video and computer/week	162
4.24	Mean nutrient intake of the children	164
4.25	Energy intake as % RDA and gradation of obesity	168
4.26	Energy intake > 100 % of RDA in relation to age	168
4.27	Energy expenditure and energy intake of children	170

4.28	Fasting blood sugar and lipid profile	174
4.29	Lipid profile in relation to the type of diet	179
4.30	Lipid profile of the children based on total fat intake	181
4.31	Lipid profile of children based on waist circumference	182
4.32	Waist circumference and presence of risk factors	182
4.33	Number of overweight and obese children at each examination	190
4.34	Determinants of BMI	193
