

C O N T E N T S

CHAPTER		PAGE
	Introduction	1
1	Responses of larvae and adults of tobacco beetle, <u>Lasioderma serricorne</u> (F.) Coleoptera : Anobiidae to media conditioned by conspecific adults and larvae	5
2	Observations on the influence of egg-wash, prepared with different fluid media, on oviposition response of females and on the behaviour of adults as well as larvae of <u>Lasioderma serricorne</u> (F.)	19
3	Observations on the influence of male body-wash prepared with different fluid media, on oviposition response and on the behaviour of adults as well as larvae of <u>Lasioderma serricorne</u> (F.)	51
4	Observations on the influence of female body-wash on oviposition response and on behaviour of adults as well as larvae of <u>Lasioderma serricorne</u> (F.)	71
5	Dose-dependent oviposition deterrence due to hexane female body-wash	90

6	Investigation on residual activity of the oviposition deterring pheromone of <u>L. serricorne</u> under ambient laboratory conditions	98
7	Oviposition deterring activity of the successive hexane body-washes of <u>Lasioderma serricorne</u> (F.)	105
8	Oviposition preference of the normal and antennectomized <u>Lasioderma serricorne</u> to the tobacco leaf disc-stacks treated with hexane female body-wash	110
9	An attempt at separation of the hexane body-wash of the female tobacco beetle, <u>Lasioderma serricorne</u> (F.) Coleoptera : Anobiidae, containing oviposition deterring pheromonal activity by thin layer chromatography	116
10	Inter-specific reactions between <u>Lasioderma serricorne</u> (F.) and <u>Tribolium castaneum</u> (Hbst.) in mixed culture	126
	General Considerations	149
	Bibliography	161
