

BIBLIOGRAPHY

S. R. Agrawal,

1. On the absolute and uniform convergence of a Fourier-Bessel series, Indian Science Congress Abstracts, January, 1975.

S. R. Agrawal and G. N. Patel,

2. On the degree of approximation of partial sums of a modified Fourier-Bessel series, Jour. N. S. University of Baroda, XXII-XXIII (1973-74), No. 3, 115-120.
3. On convergence of Fourier-Bessel series, Bull. Acad. Polon. des Sci., Math. Astronom. et Phys., XXIII, No. 12, (1975), 1255-1263.
4. On a Fourier-Bessel series of special kind, Matematički Vesnik, 13 (28), (1976), 3-8.
5. On the degree of approximation of the generating function by the partial sums of its Fourier-Bessel series, Glasnik Matematički, 11 (31), (1976), 41-45.
6. On the convergence and Riesz summability of a Fourier-Bessel series, Jñānabha, Sect. A, 5 (1975).

7. On the convergence of Fourier-Bessel series,
Aligarh Bulletin Of Mathematics.
8. On the order of coefficients and convergence
of a Fourier-Bessel series of a differentiable
function, Indian J. Pure and Applied Math.
- 8-a. On the uniform convergence of a series of Bessel
functions, Jour. N. S. University of Baroda,
XXIV (1975), No. 3, 41-44.

G. Alexits,

9. Convergence problems of orthogonal series,
Pergamon Press, N. Y., 1961.

K. I. Babenko,

10. On conjugate functions (Russian),
DAN SSSR (N.S.), 62 (1948), 157-160.

N. K. Bari,

11. A treatise on trigonometric series, Vol. I,
Pergamon Press, 1964.
12. A treatise on trigonometric series, Vol. II,
Pergamon Press, 1964.

A. Benedek and R. Panzone,

13. Mean convergence of series of Bessel functions,
Rev. de la Union Mat. Argentina, 26 (1972), 42-61.
14. On mean convergence of Fourier-Bessel series of
negative order, Studies in Appl. Math., 50 (1971),
281-292.

D. Bernoulli,

15. Theoremata de oscillationibus corporum filo
flexili connexorum et catenae verticaliter
suspendae, Comm. Acad. Sci. Imp. Petrop. VI
(1738), 108-122.

F. V. Bessel,

16. Untersuchung des Theils der planetarischen
Störungen welcher aus der Bewegung der Sonne
entsteht, Berliner Abh., 1824 (1826), 1-52.

H. Böcher,

17. On certain methods of Sturm and their applica-
tion to the roots of Bessel's functions,
Bull. Amer. Math. Soc., III (1897), 205-213.

F. Bowman,

18. Introduction to Bessel functions,
Dover Publications Inc., New York, 1958.

F. W. Bridgeman,

19. On a certain development in Bessel's functions,
Phil. Mag. (6), XVI (1908), 947-948.

H. S. Carslaw and J. G. Jaeger,

20. Conduction of heat in solids, second edition,
Oxford, Clarendon Press, 1957.

E. Cesàro,

21. Sur la multiplication des series,
Bull. des Sci. Mathematiques, 14 (1890), 114-120.

S. Chapman,

22. On non integral orders of summability of series
and integrals, Proc. London Math. Soc. (2),
9 (1910), 369-409.

T. M. Cherry,

23. On expansion in eigen functions, particularly
in Bessel functions, Proc. London Math. Soc. (2),
51 (1949), 14-45.

C. Chree,

24. On the coefficients in certain series of Bessel
functions, Phil. Mag. (6), XVII (1909), 329-331.

E. G. Cooke,

25. Gibbs phenomenon of Fourier-Bessel series and
integrals, Proc. London Math. Soc. (2), 27
(1928), 171-192.

D. P. Dalzell,

26. On the completeness of Dini's series, Jour.
London Math. Soc., XX (1945), 215-218.

U. Dini,

27. Serie di Fourier e altere rappresentazioni
analitiche delle funzioni di una variabile reale,
Fisa, 1880, 190-277.

A. C. Dixon,

28. On a property of Bessel functions, Messenger,
XXXII (1903), 7-8.

R. E. Edwards,

29. Fourier Series, (A modern introduction), Vols.
I and II, Holt, Reinhart & Winston Inc., 1967.

L. Euler,

30. De motu vibratorio tympanorum, Novi Comm. Acad.
Petrop., X (1764) [1766], 243-260.

L. Fejér,

31. A continuous function whose Fourier development
diverges for $x=0$, J. für die Reine und Angewandte
Mathematik, 137 (1910), 1-5.

W. B. Ford,

32. On the possibility of differentiating term by
term the development for an arbitrary function
of one variable in terms of Bessel functions,
Trans. Amer. Math. Soc., IV (1903), 178-184.

J. B. J. Fourier,

33. La Théorie analytique de la Chaleur, Paris, 1822.

L. Gegenbauer,

34. Bemerkung über die Bessel'schen Functionen,
Monatshefte für Math. und Phys., VIII (1897), 383-384.

R. R. Goldberg,

35. Methods of Real Analysis, Macmillan Publishing Co., N. Y., 1964.

M. L. Gol'dman,

36. Fourier-Bessel series for functions integrable with weight (Russian), Differencial'nye Uravneniya, 7 (1971), 1617-1628.

A. Gray and G. B. Mathews,

37. A Treatise on Bessel Functions, Macmillan and Co., 1922.

B. P. Gupta,

38. A note on convergence of series of ultraspherical polynomials, Amer. Math. Monthly, 65 (1958), 762-764.

B. P. Gupta and B. P. Khoti,

39. Boundedness of difference kernels of modified Fourier-Bessel series and Fourier-sine series, Indian J. Math., 11 (1969), 91-100.
40. On Riesz summability of a series of Bessel functions, Publ. Math., Debrecen, 17 (1970), 275-282.

H. Hankel,

41. Die Cylinderfunctionen erster und zweiter Art, Math. Ann. I (1869), 467-501.
42. Die Fourier'schen Reihen und Integrale für Cylinderfunctionen, Math. Ann., VIII (1875), 471-494.

G. H. Hardy,

43. Divergent Series, Oxford, Clarendon Press, 1949.

44. On the summability of Fourier series, Jour.

London Math. Soc., 17 (1942), 218-237.

G. H. Hardy and J. E. Littlewood,

45. Some more theorems concerning Fourier series and
Fourier power series, Duke Math. J., 2 (1936),
354-382.

A. Harnack,

46. Über die Darstellung einer willkürlichen function
durch die Fourier-Bessel'schen functionen,

Math. Ann., XXXV (1889), 41-62.

E. W. Hobson,

47. On the representation of a function by series of
Bessel functions, Proc. London Math. Soc. (2),
VII (1909), 359-388.

48. On a general convergence theorem and the theory
of representation of a function by series of
normal functions, Proc. London Math. Soc. (2),
VI (1908), 349-395.

49. The theory of functions of a real variable and
the theory of Fourier series, Vol. II,
Cambridge University Press, II edn., 1950.
