

ACKNOWLEDGEMENTS

My sincere gratitude is due to the late Dr.(Mrs.) K.A. Bhagwat , Reader in Botany, who inspired me to undertake doctoral studies on environment co-relating remote sensing techniques.

I thank all my senior colleagues and friends in the Department of Botany for their generous encouragement.

It has been a unique privilege for me that Prof. Dr. Gunavant M. Oza was kind enough to accept me as his student, after the sad demise of Dr.(Mrs.) K.A. Bhagwat, under whose guidance I had commenced to work. Dr. Oza's kind and gentle attitude and our passionate love for conserving nature, possibly, brought us together as teacher and student. His unflinching care and guidance and above all his splendid personal library laid foundation for my doctoral thesis concepts. I enjoyed most his intellectual companionship and shall cherish it with gratitude all my life. His wife Smt. Premalata Oza was extremely resourceful in searching for relevant resource references and her benevolent association in developing the thesis have been pleasant memories.

I extend grateful thanks to all concerned officers of the Gujarat State Forest Department for granting the necessary permissions to work in the Jambughoda Wildlife Sanctuary (JWLS).

The members of the Royal family of Jambughoda always greeted me with affectionate hospitality and their encouragement strengthened my morale to work boldly in the forests. H.H. Maharana Digvijaysinhji, former ruler of the State of Jambughoda and earlier member of the Gujarat State Wildlife Board, provided excellent information on the previous status of the forests and life-styles of the tribals during the pre-independence era. Maharani saheba and Yuvrani Gyaneshwaridevi personally cared for my needs in the field and comfort during my stay at the Palace. Yuvraj Vikramsinhji provided unstinting support and put his trusted people at my disposal, which simplified the outings in the field considerably. Vikramsinhji's word to his friend, the late Prime Minister, Shri Rajiv Gandhi, resulted in according Protected Area Status to Jambughoda Forests. I am indeed fortunate to become their family friend. I convey my gratefulness and am indebted to all members of the family and their working staff for their kind and loving support.

The younger brother of H.H. of Jambughoda - Maharaj Harishchandrasinhji, who earlier served as the Honorary Wildlife Warden of the forests, has a treasure of knowledge on the area. My discourses with him on every occasion proved fruitful and has resulted in a profound effect on my work. I rate him in high esteem.

The tribals of the region were ever friendly and responsive. I thank them all, especially my field guide, Gamir. A few hostile and 'doubtful' people never marred my enjoyment of being with these people. I enjoyed learning to talk with their accent from the tribal men and women and often rewarding comments were overheard that "I talk like one of them !" This gave me ample encouragement.

Sisters at Jeevan Jyot, Narukot and Shri Mahendrasinhji Rana of Dhanpuri were always happy to receive me and helped me to organise a programme for tribal women and children on biodiversity sustenance with the support of International Society of Naturalists (INSONA). Credit must go to them to become partners in my work,

During the course of my studies, I was fortunate to have visited 3 reputed centres for conservation research. I was accorded a warm welcome at the M. S. Swaminathan Research Foundation, Madras, where I visited sites of their Biovillages Programme. Moreover, I was privileged to have a personal dialogue with Dr. M. S. Swaminathan and other researchers at the Foundation.

The Wildlife Institute of India, Dehra Dun was visited to gain knowledge on Protected Areas and people. I thank Shri H. S. Panwar and other faculty for their help and support. Dr. Yadvendra V. Jhala and his wife Smt. Rajeshwaridevi were my kind hosts during my stay at Dehra Dun. Their help and constructive ideas for my study are sincerely appreciated.

My post-graduate fostering Department of Botany, St. Xavier's College, Bombay, extended all facilities for taxonomic studies. I extend my sincere gratitude to Dr. (Mrs.) S. M. Almeida, Head of Botany Department and Director, Blatter Herbarium, St. Xavier's College, Bombay, for her encouraging and warm attitude. Dr. Rajendra Shinde provided valuable time to help with nomenclatural work,

I owe a sense of obligation to everyone at these centres of learning as these interactions have enhanced my aptitude to devote further to the cause of conservation.

I value and appreciate the support and help of - Shri Ulhas Rane and Dr. Renee Borges, Shri Hrishikesh Oza and Shri Shirin Patel, Dr. Chandrakant Patel, Shri Mihir Dave and Shri Partho Majee, Shri Yashwant, Ms. Aditi Kapadia and Shri Nilesh Shah.

Constant support and encouragement extended by Dr. Nita Shah is sincerely appreciated. She has willingly gone through the text and provided constructive criticism. I am indeed thankful to her.

Above all, I appreciate the overwhelming help of Shri Sanjay Shah for installing his computer at my home, Shri Prakash & Vikram Bhavsar have helped with computer applications. My elder sister Smt. Manisha Pandya was my constant companion in scanning the text and in preparation of the Plates. I am indebted to all of them for lending finishing touches to my thesis.

My parents nourished me right from my formative years to love and respect nature. They have continued to shower affection and have provided loving support till the successful completion of my doctoral work, I seek their blessings always.

My parents-in-law have reposed unbelievable faith in me and my work and their loving interest has never fluctuated. I humbly bow to their kindness.

My husband Mrudang's elder brother Shri Kandarpbhai and his wife, Smt. Ami have been a source of inspiration and their unsparing effective support helped me to overcome several difficulties. I offer loving platitudes to them both.

The greatest pillar of loving tolerance and persistent patience have emerged from Mrudang and my son, Jwalin. I regret the time I was away from my son, since he was 1 1/2 years of age, when I initiated my studies.

I adore indebtedly one and all as they have a praise worthy place in my heart.

In view of this, I dedicate my thesis to Mrudang, Jwalin and members of my family.
