Introduction

i to ix

### Chapter I

1. Preliminaries and formulation of the problem. 1
2. Method of estimating parameters by least-squares theory using Gauss Method.
3. Examples.

### Chapter 2.

1. Introduction 47
2. Estimation of  $\rho$  under fixed model with five equally spaced ordinates.
3. Estimation of  $\rho$  with six, seven and eight equally spaced ordinates.
4. Estimation of the parameter under increasing variance model.
5. Appendix.

### Chapter 3.

1. Quadratic estimators of  $\rho$ : 60
  - (A) Patterson's Quadratic estimators
  - (B) Khatri C.G. and Shah B.K. 's modified quadratic estimators.
2. Expectation and variance of the general Quadratic estimators.
3. Quadratic estimators with minimum variance when  $\rho = \rho_0$ .
4. Expectation and variances of quadratic estimators for (A) and (B).
5. Efficiencies of these two estimators with respect to least squares.

6. Biases in these two estimators.
7. Estimators with low biases in the two cases.

#### Chapter 4.

- I. Modified Method for estimating  $\rho$  . 83
2. Procedure for preparing Tables.
3. Description of the Table.
4. Examples.

#### Chapter 5.

- I. Modified method for estimating 98
  - (a) when  $n=5$ .
  - (b) when  $n=6$ ,
  - (c) when  $n \geq 7$ .
2. Example.

#### Chapter 6.

- I. Modified method for fitting a combination of two exponential law by internal least-squares. 109
2. Consequences of regression equation (6.3).
3. Method for fitting  $y = A + Hx + B_1 d_1^x + B_2 d_2^x$  .
4. Consequences of regression equation (6.10).
