

CONTENTS OF TABLES

- 1.1 Tables for calculating the covariance matrix for $n=5$ to 10 equally spaced values of x for $r= 0.20(0.01)0.79$.
- 2.1 Percentage efficiencies of the ratio of linear estimator of ρ .
- 2.2 Biases in the ratio of linear estimates i.e. equations (2.6) and (2.8).
- 2.3 Multipliers $\psi^2 / \{ \rho^{2x} (1-\rho) \}$ in the asymptotic variance of various estimators for increasing variance model.
- 3.1 Efficiencies of two Quadratic Estimators.
- 3.2 Comparison of Biases in two Quadratic estimators.
- 3.3 Values of k/ℓ for zero bias for two cases.
- 3.4 Bias in Patterson's Quadratic estimators.
- 3.5 Bias in Khatri and Shah's modified Quadratic estimators.
- 4.1 Values of U_x and V_x for $n=6$ to 14.
- 4.2 Percentage efficiencies of the estimates of ρ obtained from equation (4.3) using U_x and V_x of Table 4.1.
- 5.1 Values of U_x , V_x and Z_x for $n=7$ to 14.
- 5.2 Percentage efficiencies of the estimators of ρ obtained from equation (5.3) using U_x , V_x and Z_x of Table 5.1 for $n=14$ for all values of ρ .
- 5.3 Percentage efficiencies of the estimates of ρ obtained from equation (5.3) using U_x , V_x and Z_x for $\rho=0$ and 1 and for $n=7$ to 14.
