

CONTENTS

CHAPTER	PAGE
INTRODUCTION	1
I Histomorphological alterations in the thyroid, adrenal and testes of pigeons treated with pineal indoles and pCPA during the recrudescence phase.	9
II Alterations in Carbohydrate metabolism and pancreatic islet functions in pigeons treated with pineal indoles and pCPA.	35
III Melatonin replacement to pinealectomised pigeons in the breeding season is able to restore thyroid and adrenal function but not of testes.	47
IV Carbohydrate metabolism and pancreatic islet functions in pinealectomised pigeons replaced with melatonin in the breeding season.	67
V Effects of pinealectomy or exogenous melatonin on serum hormone levels and histomorphology of testes, adrenal and thyroid of feral pigeons in the sexually quiescent phase.	78

VI	Effect of pinealectomy or exogenous melatonin on carbohydrate metabolism and islet function in feral pigeons during the non-breeding season.	94
VII	Functional alterations of testes, adrenal and thyroid in intact and pinealectomised pigeons exposed to long photoperiod prior to the recrudescence phase.	102
VIII	Alterations in carbohydrate metabolism in intact and pinealectomised pigeons exposed to long photoperiod prior to the recrudescence phase.	129
IX	Photoperiod-Adrenal interactions on testicular recrudescence in the feral pigeons, <u>Columba livia</u> .	143
X	Photoperiod-Adrenal interactions on carbohydrate metabolism in the feral pigeons during the recrudescence phase.	168
