

# List of Figures

| <b>Figure No.</b> | <b>Caption</b>  | <b>Page No.</b> |
|-------------------|---|-----------------|
| <b>Fig. 1.1</b>   | <i>Schematic representation of Neutron Activation Analysis steps and illustration of the neutron induced reaction process.</i>  | 2               |
| <b>Fig. 1.2</b>   | <i>A schematic diagram of the Accelerator Driven Sub-Critical System (ADSs).</i>  | 3               |
| <b>Fig. 1.3</b>   | <i>The GUI of the EXFOR database.</i>   | 6               |
| <b>Fig. 1.4</b>   | <i>The GUI of the ENDF database.</i>  | 7               |
| <b>Fig. 1.5</b>   | <i>The GUI of the RIPL database.</i>  | 8               |
| <b>Fig. 1.6</b>   | <i>The GUI of the NNDC database.</i>  | 8               |
| <b>Fig. 1.7</b>   | <i>The comparison of the existing datasets in the literature and evaluated data for the <math>^{51}\text{V}(n, p)^{51}\text{Ti}</math> and <math>^{65}\text{Cu}(n, p)^{65}\text{Ni}</math> reactions cross section.</i> | 10              |
| <b>Fig. 1.8</b>   | <i>The comparison of the existing datasets in the literature and evaluated data for the <math>\text{Se}(n, p)\text{As}</math> reactions cross section of <math>^{76, 77, 78, 80}\text{Se}</math> isotopes.</i>          | 11              |
| <b>Fig. 1.9</b>   | <i>The comparison of existing literature and evaluated data of the <math>^{121}\text{Sb}(n, 2n)^{120}\text{Sb}^m</math> and <math>^{123}\text{Sb}(n, 2n)^{122}\text{Sb}</math> reactions.</i>                           | 12              |
| <b>Fig. 1.10</b>  | <i>The comparison of the existing datasets in the literature and evaluated data for the <math>^{103}\text{Rh}(n, 2n)^{102}\text{Rh}</math> reaction cross section.</i>  | 13              |
| <b>Fig. 1.11</b>  | <i>The comparison of existing datasets in literature and evaluated data for the <math>^{48}\text{Ti}(n, p)^{48}\text{Sc}</math> and <math>^{52}\text{Cr}(n, p)^{52}\text{V}</math> reactions cross section.</i>         | 14              |
| <b>Fig. 2.1</b>   | <i>A schematic diagram of the BARC-TIFR Pelletron accelerator facility, Mumbai.</i>   | 20              |
| <b>Fig. 2.2</b>   | <i>The 6M irradiation set-up and target assemblies at BARC-TIFR Pelletron accelerator facility Mumbai.</i>  | 21              |
| <b>Fig. 2.3</b>   | <i>Sample preparation rolling machine and pelletizer at target lab of BARC-TIFR facility.</i>   | 23              |
| <b>Fig. 2.4</b>   | <i>A schematic representation of the arrangement for neutron irradiation.</i>   | 24              |

|                 |   |    |
|-----------------|---|----|
| <b>Fig. 2.5</b> | <i>A schematic block diagram of gamma spectrometry set-up at BARC-TIFR facility.</i>  | 26 |
| <b>Fig. 2.6</b> | <i>The GUI of the Genie and MAESTRO Interface software.</i>   | 29 |
| <b>Fig. 2.7</b> | <i>Off-line <math>\gamma</math>-ray spectrometry method setup along with lead shield HPGe detector.</i>   | 30 |
| <b>Fig. 3.1</b> | <i>The neutron flux spectrum produced by the <math>^{nat}\text{Li}(p, n)</math> reaction at <math>0^\circ</math> of the 10, 15 and 20 MeV proton energies are obtained from the reference data of the C. H. Poppe et al. [3] and M. W. McNaughton et al. [4].</i> | 34 |
| <b>Fig. 3.2</b> | <i>The energy calibration curve of the HPGe detector.</i>   | 36 |
| <b>Fig. 3.3</b> | <i>The efficiency calibration curve of the HPGe detector with and without coincidence summing effect correction factor <math>K_c</math> of the HPGe detector for the <math>^{152}\text{Eu}</math> source.</i>   | 37 |
| <b>Fig. 3.4</b> | <i>The HPGe detector which is properly shielded by lead reduces the contribution of natural radioactivity.</i>  | 39 |
| <b>Fig. 3.5</b> | <i>The off-line <math>\gamma</math>-ray spectrum of a <math>^{152}\text{Eu}</math> point source obtained with a HPGe detector.</i>  | 40 |
| <b>Fig. 3.6</b> | <i>Off-line <math>\gamma</math>-ray energy observed after the neutron irradiation. The <math>\gamma</math>-ray transitions from the decay of the Ti, Ni, Rh, Sb, As and Na nuclei have been marked.</i>   | 42 |
| <b>Fig. 3.7</b> | <i>The standard IRDFF-1.05 data for the <math>^{27}\text{Al}(n, \alpha)^{24}\text{Na}</math> monitor reaction.</i>  | 45 |
| <b>Fig. 4.1</b> | <i>Nuclear reaction cross section for the three reaction mechanisms with emission energy.</i>   | 66 |
| <b>Fig. 4.2</b> | <i>Schematic representation of the <math>a + A \rightarrow [C^*] \rightarrow B + b</math> via the formation of the compound nucleus <math>C^*</math>.</i>   | 68 |
| <b>Fig. 4.3</b> | <i>Schematic representation of the way that the low-lying states of the residual nucleus B can be excited in a direct reaction <math>a + A \rightarrow B + b</math>.</i>  | 69 |
| <b>Fig. 4.4</b> | <i>The pre-equilibrium mechanism based on the exciton model.</i>  | 73 |

|                 |  |     |
|-----------------|--|-----|
| <b>Fig. 4.5</b> | <i>A simplified representation of the function and incorporated models of the TALYS code.</i>  | 80  |
| <b>Fig. 4.6</b> | <i>The GUI of the EMPIRE code.</i>   | 81  |
| <b>Fig. 5.1</b> | <i>The comparison of existing literature and evaluated data of the <math>^{121}\text{Sb}(n, 2n)^{120}\text{Sb}^m</math>, <math>^{121}\text{Sb}(n, 2n)^{120}\text{Sb}^g</math> and <math>^{121}\text{Sb}(n, 2n)^{120}\text{Sb}</math> reactions.</i>  | 93  |
| <b>Fig. 5.2</b> | <i>The experimental data of the <math>^{121}\text{Sb}(n, 2n)^{120}\text{Sb}^m</math>, <math>^{121}\text{Sb}(n, 2n)^{120}\text{Sb}^g</math> and <math>^{121}\text{Sb}(n, 2n)^{120}\text{Sb}</math> reactions and theoretical calculations from the TALYS and EMPIRE codes using different level density models.</i> | 96  |
| <b>Fig. 5.3</b> | <i>The comparison of existing literature and evaluated data of the <math>^{123}\text{Sb}(n, 2n)^{122}\text{Sb}^m</math>, <math>^{123}\text{Sb}(n, 2n)^{122}\text{Sb}^g</math> and <math>^{123}\text{Sb}(n, 2n)^{122}\text{Sb}</math> reactions.</i>  | 98  |
| <b>Fig. 5.4</b> | <i>The experimental data of the <math>^{123}\text{Sb}(n, 2n)^{122}\text{Sb}^m</math>, <math>^{123}\text{Sb}(n, 2n)^{122}\text{Sb}^g</math> and <math>^{123}\text{Sb}(n, 2n)^{122}\text{Sb}</math> reactions and theoretical calculations from the TALYS and EMPIRE codes using different level density models.</i> | 100 |
| <b>Fig. 5.5</b> | <i>Isomeric cross section ratio (<math>\sigma_m/\sigma_g</math>) and theoretical calculations from the TALYS and EMPIRE codes using different level density models.</i>  | 102 |
| <b>Fig. 5.6</b> | <i>Present measurements and reported literature isomeric state cross sections are compared with the TALYS (ver. 1.95) calculations based on the level density models.</i>  | 104 |
| <b>Fig. 5.7</b> | <i>Present measurements and reported literature ground state cross sections are compared with the TALYS (ver. 1.95) calculations based on the level density models.</i>  | 105 |
| <b>Fig. 5.8</b> | <i>The present measurements and reported literature cross sections are compared with the latest evaluated data libraries.</i>  | 106 |
| <b>Fig. 5.9</b> | <i>Present measurements and reported literature cross sections are compared with the TALYS (ver. 1.95) (a and b) and</i>   | 107 |

*EMPIRE (ver. 3.2.3) (c and d) calculations based on the level density models.*

- Fig. 5.10** *Measured isomeric cross section ratio ( $\sigma_m/\sigma_g$ ) and TALYS (ver. 1.95) theoretical calculations based on the phenomenological and microscopic level density models.* 108
- Fig. 6.1.** *(a) and (b) Comparison of the  $^{76}\text{Se}(n, p)^{76}\text{As}$  reaction cross sections with literature data form EXFOR compilation, with JENDL, TENDL and ENDF evaluated libraries and with the theoretical results obtained from EMPIRE-3.2.2 and TALYS-1.9 codes.* 123
- Fig. 6.2.** *(a) and (b) Comparison of the  $^{77}\text{Se}(n, p)^{77}\text{As}$  reaction cross section with literature data form EXFOR compilation, with JENDL, TENDL and ENDF evaluated libraries and with the theoretical results obtained from EMPIRE-3.2.2 and TALYS-1.9 codes.* 125
- Fig. 6.3.** *(a) and (b) Comparison of the  $^{78}\text{Se}(n, p)^{78}\text{As}$  reaction cross sections with literature data form EXFOR compilation, with JENDL, TENDL and ENDF evaluated libraries and with the theoretical results obtained from EMPIRE-3.2.2 and TALYS-1.9 codes.* 126
- Fig. 6.4.** *(a) and (b) Comparison of the  $^{80}\text{Se}(n, p)^{80}\text{As}$  reaction cross section with literature data from EXFOR compilation, JENDL, TENDL and ENDF evaluated libraries and with the theoretical results obtained from EMPIRE-3.2.2 and TALYS-1.9 codes.* 128
- Fig. 6.5.** *Comparison of the present data with the previous measurements taken from the EXFOR compilation, data of S. M. Grimes et al. and the evaluated data from the ENDF/B-VIII.0, JEFF-3.3, JENDL-4.0/HE, CENDL-3.2, TENDL-2019 and FENDL-3.2 libraries.* 131
- Fig. 6.6.** *The present  $^{65}\text{Cu}(n, p)^{65}\text{Ni}$  reaction cross section along with the experimental data and theoretical values based on the (a)-* 133

- (b) TALYS (ver. 1.9) and (c)-(d) EMPIRE (ver. 3.2.3) codes with the default option.
- Fig. 6.7.** The present  $^{65}\text{Cu}(n, p)^{65}\text{Ni}$  reaction cross section along with the experimental data and adjusted theoretical values obtained from the (a)-(b) TALYS (ver. 1.9) and (c)-(d) EMPIRE (ver. 3.2.3) codes with adjusted parameters. 136
- Fig. 6.8.** Comparison of the activation cross section [7-21] and total proton emission cross sections [22] with the theoretical calculations performed by the TALYS code. 136
- Fig. 6.9.** The contribution of the cross section in  $^{65}\text{Cu}(n, p)^{65}\text{Ni}$  reaction from different reaction processes (direct, pre-equilibrium and compound) to the total reaction cross section was calculated using the TALYS code. 137
- Fig. 6.10.** Literature cross sections compared with the latest evaluated data libraries. 139
- Fig. 6.11.** Literature cross sections compared with the TALYS (ver. 1.95) calculations based on the phenomenological and microscopic level density models (a-b) Default (c-d) Adjusted. 141
- Fig. 6.12.** The comparison of the measured  $^{51}\text{V}(n, p)^{51}\text{Ti}$  reaction cross section and the experimental and JENDL/AD-2017, ENDF/B-VIII.0 and TENDL-2019 evaluation. 145
- Fig. 6.13.** The comparison of the measured  $^{51}\text{V}(n, p)^{51}\text{Ti}$  reaction cross section with literature, evaluations and with the theoretical calculations using the statistical Talys (ver. 1.9) code using different (a) optical potential models and (b) pre-equilibrium models. 148
- Fig. 6.14.** The comparison of the  $^{51}\text{V}(n, p)^{51}\text{Ti}$  reaction cross section with literature, evaluations and with the theoretical calculations 149

using the statistical Talys (ver. 1.9) code using different (a) Phenomenological and (b) Microscopic level density models.

- Fig. 6.15.** The theoretical calculations of the  $^{51}\text{V}(n,p)^{51}\text{Ti}$  reaction cross section as performed by the Talys (ver. 1.9) code with the adjusted parameters of the (a) Phenomenological and (b) Microscopic level density models. 150
- Fig. 6.16.** The contribution of the different cross section in  $^{51}\text{V}(n,p)^{51}\text{Ti}$  reaction. 151
- Fig. 6.17.** Literature cross sections compared with the latest evaluated data libraries. 152
- Fig. 6.18.** Literature cross sections compared with the TALYS (ver. 1.95) calculations based on the phenomenological and microscopic level density models (a-b) Default and (c-d) Adjusted. 154
