

LIST OF FIGURES

Figure 1: Sources of nitrate contamination in groundwater.....	19
Figure 2: General mechanism of nitrate reduction (Z. Wang et al., 2021).....	22
Figure 3 : Calibration plot of NO ₃ -N (a), NO ₂ -N (b) and NH ₃ -N (c).....	46
Figure 4: Fresh PVA beads (a), Ag coated on PVA beads (b), and AgMPs (c).....	47
Figure 5: Experimental setup in an undivided cell.....	49
Figure 6: Experimental setup in a divided cell.....	49
Figure 7 : SEM analysis of Ag-coated PVA bead.....	65
Figure 8 : EDAX spectra of Ag-PVA bead (a), and Ag coated on the surface of PVA bead (b). The inset pictures show the respective SEM images.....	66
Figure 9 : Undivided cell - Time course profile of NO ₃ -N removal in the absence (dotted line) and presence (solid line) of Ag-PVA beads.....	67
Figure 10 : Divided cell - Time course profile of NO ₃ -N removal in the absence (dotted line) and presence (solid line) of Ag-PVA beads.....	68
Figure 11 : Removal of NO ₃ -N with various catalyst concentrations.....	70
Figure 12 : Nitrate reduction using various cathode materials in absence and presence of Ag-PVA beads.....	72
Figure 13 : Effect of current density on nitrate removal (a)5mA/cm ² , (b)10mA/cm ² , (c)15mA/cm ² , and (d)20mA/cm ²	73
Figure 14 : Effect of current density in the presence of Ag-PVA beads. Inset figure shows specific energy consumption for nitrate removal.....	74
Figure 15 : Effect of initial nitrate concentration.....	75
Figure 16 : Reusability of Ag-PVA beads.....	76
Figure 17 : SEM analysis of fresh AgMPs (a) and (b); used AgMPs (c) and (d).....	78
Figure 18 : XRD analysis of fresh and used AgMPs.....	79
Figure 19 : NO ₃ -N removal in the absence (dotted line) and presence (solid line) of AgMPs in an undivided cell.....	81
Figure 20 : NO ₃ -N removal in the absence (dotted line) and presence (solid line) of AgMPs in a divided cell.....	82
Figure 21 : Effect of various concentrations of AgMPs catalyst.....	84
Figure 22 : Effect of inter-electrode spacing on NO ₃ -N elimination in a divided cell in the presence of AgMPs.....	86
Figure 23 : Nitrate reduction using various cathode materials in the absence and presence of AgMPs.....	88

Figure 24 : Effects of current density on nitrate removal and selectivity of end-products.....	90
Figure 25 : Effect of initial NO ₃ -N concentration on nitrate reduction and its selectivity.....	91
Figure 26 : Experiments and results of simultaneous nitrate removal and ammonia oxidation.	94
Figure 27: Reusability of AgMPs (a) nitrate reduction, (b) nitrite generation, (c) ammonia generation, and (d) TN removal.....	96
Figure 28 : Mechanism of nitrate reduction on the cathode in the absence and presence of Ag-PVA beads and AgMPs.....	98
Figure 29 : Mechanism of nitrate reduction on the cathode in the absence and presence of AgMPs.....	99
Figure 30 : Nitrate removal in the absence (a) and presence of Ag-PVA (b) beads in groundwater.....	100
Figure 31 : Nitrate removal in the absence (a) and presence (b) of AgMPs in groundwater.....	102
Figure 32 : Nitrate removal using Ti/Co ₃ O ₄ in groundwater.....	102
Figure 33 : Nitrate removal using AgMPs with Ti/Co ₃ O ₄ in groundwater.....	104
Figure 34 : XRD analysis of fresh and used Ti/Co ₃ O ₄	106
Figure 35 : Effect of initial nitrate concentration.....	108
Figure 36 : Effect of current density on nitrate removal.....	110
Figure 37 : Reusability of Ti/Co ₃ O ₄ cathode.....	112
Figure 38 : Concentration of metals before and after treatment.....	112
Figure 39 : XRD analysis of precipitates formed in treated water.....	113
Figure 40 : XRD analysis of struvite.....	115
Figure 41 : Ammonia removal by struvite formation.....	116
