

Acknowledgment

Paucity of words makes it difficult me to express my sincere thanks and deep sense of gratitude towards the persons who helped in the present work.

I take it as a privilege and duty to express my reverence to my respected guide **Dr. B.M. Palan**, Director, Behavioural Medicine Clinic and Centre for Stress Management, Baroda, whose innate innovativeness led me to choose this study. His invaluable advice and sustained interest enlightened my difficult path and made this study a success. It is due to his constant guidance, constructive criticism, and, scientific approach that I have been able to complete this work. At every turn, his critical and discerning eye picked out errors and kept the work going within the narrow confines of quality on one side and feasibility on the other. He has given me great latitude of freedom in planning and execution of work. Besides being a teacher, he has been a philosopher and a preacher for me, and whatever I have learnt from him shall forever remain etched on my mind. I bow my head with deep sense of gratitude and indebtedness.

I am indebted to Dr. (Mrs.) S. Chandwani, Professor and Head, Department of Physiology, Medical College, Baroda for being a rich source of invaluable inspiration, and guidance during my study. She not only permitted me to do work in the department but also given me the leisure from the departmental activity. I sincerely wish to extend acknowledgment, with a sense of gratitude to her.

I express my sincere gratitude to the Dean, Medical College, Faculty of Medicine, Baroda for permitting me to use all the available facilities.

I would especially like to express my thankfulness to Smt. Madhuben Shah, Managing Trustee, Sir Sayajirao Diamond Jubilee Trust and Haribhakti Raneshwar Mahadev Trust, Baroda, Dr. Vishnuprasad Acharya, Director, Yog Niketan, Baroda and Dr. (Ms) Pragnaben Shah, Co-ordinator, Aarogya Mandir, Baroda, for allowing me to work in their institute and utilizing the available resources.

My humble thanks are due to Dr. (Mrs.) G.K. Hathi, Professor, Department of Physiology, Medical College Baroda for the inspiration and encouragement during my study.

My task would have been impossible if I did not have the support from Dr. D.R. Trivedi, Dr. K. Singlot and Shri Dara Bhesania, who have keenly helped me directly or indirectly for the present work. There are some worthy names to acknowledge and thank which include Mr. M.B. Jani, Mr. K.D. Pandya, Mrs. A.K. Pandya, Dr. A.N. Joshi, Dr. H.N. Jadav, Dr. P.G. Chakravarti, Dr. S.S. Shah, Dr. A. Dave and many others. My heartfelt thanks to my well wishers and wonderful friends.

Herewith I take an opportunity to thank participants and patients, who probably never know their pivotal role in this study, without which this work would not have been completed.

Lastly, I would be doing injustice if I donot extend my thanks to Mr. Prashant Vasant for computing my work and giving the final shape to the thesis.

Finally and above all I would like to acknowledge my parents, my wife and my children for everything.

September, 1997.
Baroda

Narendra Pathak
