

LIST OF PHOTOGRAPHS

- Figure 1. Kidney: Normal
- Figure 2. Kidney: Showing minimal tubular dilatation with flattening of epithelium
- Figure 3. Kidney: Tubular dilatation with eosinophilic material in the lumen
- Figure 4. Ovary: Normal follicle
- Figure 5: Ovary: Atretic follicle
- Figure 6: Ovary: Atretic follicle with flattened corpus leuteum
- Figure 7: Ovary: AAtretic follicle with flattened granulose cell layer
- Figure 8: Adrenal: Presence of cytoplasmic vacuolation in zona fasciculate
- Figure 9: Thymus: Normal
- Figure 10. Thymus: Atrophy
- Figure 11. Brain Cortex: Inflammatory cell infiltration
- Figure 12. Brain: Perivascular cuffing and neurosis
- Figure 13. Liver (Pup): Normal
- Figure 14. Liver (Pup): Moderate vacuolation and congestion
- Figure 15. Liver (Pup): Extra medullary hematopoiesis
- Figure 16. Liver (Pup): Sinusoidal dilatation
- Figure 17. Kidney(Pup): Normal
- Figure 18. Kidney(Pup): Tubular dilatation with flattened epithelium
- Figure 19. Kidney(Pup): Tubular degeneration dilatation and eosinophilic material
- Figure 20. Brain(Pup): Normal
- Figure 21. Brain (Pup): Pale areas
- Figure 22. Spleen (Pup): Normal
- Figure 23. Spleen(Pup): Extramedullary hematopoiesis characterized by increase in aggregation of erythroid precursors and magalokaryotes
- Figure 24. Thymus(Pup): Normal
- Figure 25. Thymus (Pup): Atrophy characterized by epithiolisation
