INTRODUCTION	2

PART I

CHAPTER 1	SOME PROPERTIES OF BALANCED INCOMPLETE BLOCK DESIGNS	14
1.1	Introduction	14
1.2	An upper bound for the number of blocks in a BIB design	14
1.3	Upper bound for the number of blocks in a BIB design having a given number of treatments common with a given block	17
CHAPTER 2	AN UPPER BOUND FOR THE NUMBER OF DISJOINT BLOCKS IN CERTAIN PBIB DESIGNS	23
2.1	Introduction	23
2.2	An upper bound for the number of disjoint blocks in SRGD designs	24
2.3	An upper bound for the number of disjoint blocks in certain triangular designs	29
2.4	An upper bound for the number of disjoint blocks in certain L_2 designs	35

CONTENTS

2.5	An upper bound for the number of disjoint blocks in certain rectangular designs	40
CHAPTER 3	BOUNDS FOR THE NUMBER OF COMMON TREATMENTS BETWEEN ANY TWO BLOCKS OF CERTAIN PBIB DESIGNS	47
3.1	Introduction	47
3.2	Bounds for the number of common treatments between any two blocks of SRGD designs	47
3.3	Bounds for the number of common treatments between any two blocks of certain triangular designs	50
3.4	Bounds for the number of common treatments between any two blocks of certain L_2 designs	52
3.5	Bounds for the number of common treatments between any two blocks of certain rectangular designs	55
CHAPTER 4	ON THE BLOCK STRUCTURE OF CERTAIN PBIB DESIGNS	59
4.1	Introduction	59
4.2	SRGD designs	59
4.3	Triangular designs	63
4.4	L_2 designs	65
4.5	Rectangular designs	67

CONTENTS

CHAPTER 5	ON THE BLOCK STRUCTURE OF EQUI-REPLICATE INCOMPLETE BLOCK DESIGNS	70
5.1	Introduction	70
5.2	Necessary and sufficient condition for the blocks of an equi-replicate incomplete block design to have the same number of treatments in common	71
5.3	Bounds for the number of disjoint blocks in equi-replicate incomplete block designs	77

PART II

CHAPTER 6	ESTIMATION IN THE TRUNCATED BINOMIAL DISTRIBUTION	82
6.1	Introduction	82
6.2	Singly truncated binomial distribution	83
6.2.1	The method of moments estimator of p	84
6.2.2	Comparison with the maximum likelihood estimator of p	86
6.2.3	Comparison with the ratio- estimator of p	88
6.2.4	An illustrative example	90
6.3	Doubly truncated binomial distribution	91
6.3.1	The method of moments estimator of the parameter p	91

CONTENTS

6.3.2	Comparison with the maximum likelihood estimator of p	94
6.3.3	A special case: $h = k = 1$	95
6.3.4	An illustrative example	98
CHAPTER 7	ESTIMATION IN THE TRUNCATED NEGATIVE BINOMIAL DISTRIBUTION	101
7.1	Introduction	101
7.2	The truncated negative binomial distribution	102
7.3	The three-moments estimators of the parameters of the singly truncated negative binomial distribution	104
7.4	Comparison with the maximum likelihood estimators	106
7.5	An illustrative example	109
CHAPTER 8	THE DISPLACED NEGATIVE BINOMIAL DISTRIBUTION	113
8.1	Introduction	113
8.2	The maximum likelihood estimation	115
8.3	Method A - using zero-cell frequency and the first three sample moments	118
8.4	Method B - using first four sample moments	124
8.5	Comparison of the joint asymptotic efficiencies of Method A and Method B	129

CONTENTS

CHAPTER 9	ESTIMATION OF THE PARAMETERS OF DOUBLY TRUNCATED NORMAL DISTRIBUTION FROM FIRST FOUR SAMPLE MOMENTS	134
9.1	Introduction	134
9.2	Doubly truncated normal distribution	135
9.3	Estimators of the parameters	136
9.4	Comparison with the maximum likelihood estimators	138
9.5	Example	142

PART III

CHAPTER 10	USE OF A PRIORI KNOWLEDGE IN THE ESTIMATION OF A PARAMETER FROM DOUBLE SAMPLES	143
10.1	Introduction	143
10.2	Preliminary test region and estimator	145
10.3	Properties of P.T. estimator	147
10.4	Application to the estimation of the variance of a normal population	152
	APPENDIX 2.1	161
	APPENDIX 4.1	163
	APPENDIX 4.2	165
	APPENDIX 4.3	167
	APPENDIX 4.4	168
