

APPENDIX I - DATA FOR MURMUR

Here follows the full data, where specifically defined environments for the murmured vowels can be seen. These are the environments in which vowels are bound to be murmured, (in the murmured dialects of course).

Data is listed in such a way as to enable the reader to note the environments where the vowels cannot be murmured. The data starts alphabetically. Murmured vowels are underlined and the curved arrow shows the spread of murmur.

	No murmur	Murmur		No murmur	Murmur

r	[^{ra}hi] 'habitant' [^{ra}he^han] 'living place' [^{ra}hu] 'a demon who swallowed the sun and the moon'	It should be noted that all the voiced aspirated stops - [g^h, d₃^h, d^h, t^h, b^h] do not precede voiced medial [h]. There is ^a not a single word which begins with any of these voiced aspirated stops, followed by a sequence of vowel and [h]. Voiced breath of these stops followed by voiced breath of [h] almost is ^a phonetic impossibility.
