

## CONTENTS

### CHAPTER I : INTRODUCTION

|     |                                                                 |   |
|-----|-----------------------------------------------------------------|---|
| 1.1 | Literature related to the problems<br>considered in this thesis | 1 |
| 1.2 | Definitions                                                     | 3 |
| 1.3 | Summary of the thesis                                           | 8 |

### CHAPTER II : ON NECESSARY BEST ESTIMATORS

|     |                |    |
|-----|----------------|----|
| 2.0 | Summary        | 10 |
| 2.1 | NBE of Order 1 | 10 |
| 2.2 | NBE of Order 2 | 12 |

### CHAPTER III : ON LINEAR INVARIANT UNBIASED ESTIMATORS

|     |                                                                                        |    |
|-----|----------------------------------------------------------------------------------------|----|
| 3.0 | Summary                                                                                | 16 |
| 3.1 | Introduction                                                                           | 16 |
| 3.2 | Connectedness and the C-matrix in<br>sampling designs                                  | 18 |
| 3.3 | A necessary condition for the existence<br>of a linear invariant unbiased<br>estimator | 21 |
| 3.4 | Existence of an admissible linear<br>invariant unbiased estimator                      | 22 |

|                      |       |                                                                                                            |    |
|----------------------|-------|------------------------------------------------------------------------------------------------------------|----|
| <u>CHAPTER IV</u>    | :     | <u>ADMISSIBILITY OF MURTHY'S AND<br/>MIDZUNO ESTIMATORS IN THE CLASS<br/>OF LINEAR UNBIASED ESTIMATORS</u> |    |
| 4.0                  |       | Summary                                                                                                    | 29 |
| 4.1                  |       | General result                                                                                             | 29 |
| 4.2                  |       | Admissibility of Murthy's estimators                                                                       | 35 |
| 4.3                  |       | Application to Midzuno's Scheme                                                                            | 40 |
| <br><u>CHAPTER V</u> | <br>: | <br><u>SOME RESULTS ON THE MINIMAL COMPLETE<br/>CLASS OF LINEAR ESTIMATORS</u>                             |    |
| 5.0                  |       | Summary                                                                                                    | 44 |
| 5.1                  |       | Introduction                                                                                               | 44 |
| 5.2                  |       | A sufficient condition under which<br>Roy-Chakravarti class is not minimal<br>complete                     | 46 |
| 5.3                  |       | Identification of the minimal complete<br>class in a special case                                          | 49 |
|                      |       | <u>REFERENCES</u>                                                                                          | 63 |
