| <b>1 INTRODUCTION AND FUNDAMENTAL CONCEPTS</b>              | <b>2</b> |
| 1.1 Fluid . . . . .                                         | 2        |
| 1.2 Newtonian fluid . . . . .                               | 2        |
| 1.3 Non-Newtonian fluid . . . . .                           | 2        |
| 1.4 Applications of Non-Newtonian fluid . . . . .           | 2        |
| 1.5 Steady and unsteady flow . . . . .                      | 3        |
| 1.6 Compressible and incompressible flow . . . . .          | 3        |
| 1.7 Laminar flow . . . . .                                  | 3        |
| 1.8 Magnetohydrodynamics . . . . .                          | 4        |
| 1.9 Applications of Magnetohydrodynamics . . . . .          | 4        |
| 1.10 Magnetohydrodynamics Flow . . . . .                    | 4        |
| 1.11 Entropy . . . . .                                      | 5        |
| 1.11.1 Local rate of entropy generation . . . . .           | 5        |
| 1.12 Williamson fluid . . . . .                             | 6        |
| 1.12.1 Constitutive equation of Williamson fluid . . . . .  | 6        |
| 1.13 Carreau fluid . . . . .                                | 6        |
| 1.13.1 Carreau fluid model . . . . .                        | 7        |
| 1.14 Micropolar fluid . . . . .                             | 7        |
| 1.14.1 Constitutive equations of micropolar fluid . . . . . | 7        |
| 1.15 Heat Transfer . . . . .                                | 8        |
| 1.15.1 Conduction . . . . .                                 | 8        |
| 1.15.2 Radiation . . . . .                                  | 8        |

|                                                                        |    |
|------------------------------------------------------------------------|----|
| 1.15.3 Convection . . . . .                                            | 9  |
| 1.16 Mass Transfer . . . . .                                           | 10 |
| 1.17 Convective flows . . . . .                                        | 10 |
| 1.18 Thermal Conductivity and temperature gradient . . . . .           | 10 |
| 1.19 Governing equations . . . . .                                     | 11 |
| 1.19.1 Conservation of mass (Equation of continuity) . . . . .         | 11 |
| 1.19.2 Conservation of Momentum (Equation of Motion) . . . . .         | 12 |
| 1.19.3 Conservation of Energy(Equation of Energy) . . . . .            | 12 |
| 1.19.4 Conservation of Mass Flux (Equation of Concentration) . . . . . | 12 |
| 1.20 Joule heating . . . . .                                           | 13 |
| 1.21 Viscous dissipation . . . . .                                     | 13 |
| 1.22 Dufour effect . . . . .                                           | 13 |
| 1.23 Soret effect . . . . .                                            | 13 |
| 1.24 Chemical reaction . . . . .                                       | 14 |
| 1.25 Forces acting on the fluid . . . . .                              | 14 |
| 1.25.1 Buoyancy . . . . .                                              | 14 |
| 1.25.2 Boussinesq approximation . . . . .                              | 14 |
| 1.26 Dimensionless Parameters . . . . .                                | 15 |
| 1.26.1 Reynolds Number . . . . .                                       | 15 |
| 1.26.2 Eckert number . . . . .                                         | 16 |
| 1.26.3 Prandtl Number . . . . .                                        | 16 |
| 1.26.4 Magnetic parameter . . . . .                                    | 16 |
| 1.26.5 Thermal Grashof Number . . . . .                                | 16 |
| 1.26.6 Solutal Grashof Number . . . . .                                | 16 |
| 1.26.7 Thermal Biot number . . . . .                                   | 17 |
| 1.26.8 Solutal Biot number . . . . .                                   | 17 |
| 1.26.9 Soret Number . . . . .                                          | 17 |
| 1.26.10 Schmidt number . . . . .                                       | 17 |
| 1.26.11 Suction parameter . . . . .                                    | 17 |
| 1.26.12 Heat generation/absorption coefficient . . . . .               | 18 |
| 1.26.13 Radiation parameter . . . . .                                  | 18 |
| 1.26.14 Slip parameter . . . . .                                       | 18 |
| 1.26.15 Brinkman number . . . . .                                      | 18 |
| 1.26.16 Bejan number . . . . .                                         | 18 |
| 1.26.17 Temperature Ratio parameter . . . . .                          | 19 |
| 1.26.18 Skin friction factor . . . . .                                 | 19 |
| 1.26.19 Nusselt number . . . . .                                       | 19 |

|          |                                                                                    |           |
|----------|------------------------------------------------------------------------------------|-----------|
| 1.26.20  | Sherwood number . . . . .                                                          | 19        |
| 1.26.21  | Chemical Reaction parameter . . . . .                                              | 19        |
| 1.26.22  | Unsteadiness parameter . . . . .                                                   | 19        |
| 1.26.23  | Material parameter . . . . .                                                       | 20        |
| 1.27     | Homotopy Analysis Method . . . . .                                                 | 20        |
| 1.27.1   | Zero-order deformation equation . . . . .                                          | 20        |
| 1.27.2   | High-order deformation equation . . . . .                                          | 21        |
| 1.27.3   | Convergence analysis . . . . .                                                     | 22        |
| 1.28     | Review of relevent literature . . . . .                                            | 23        |
| <b>2</b> | <b>Entropy optimized MHD fluid flow over a vertical stretching sheet</b>           | <b>28</b> |
| 2.1      | Introduction of the Problem . . . . .                                              | 28        |
| 2.2      | Novelty of the chapter . . . . .                                                   | 29        |
| 2.3      | Mathematical Formulation of the Problem . . . . .                                  | 29        |
| 2.4      | Solution by Homotopy Analysis Method . . . . .                                     | 32        |
| 2.4.1    | Zero-th order deformation . . . . .                                                | 32        |
| 2.4.2    | i-th order deformation . . . . .                                                   | 34        |
| 2.4.3    | Convergence Analysis . . . . .                                                     | 34        |
| 2.5      | Result and Discussion . . . . .                                                    | 35        |
| 2.6      | Conclusion . . . . .                                                               | 47        |
| <b>3</b> | <b>Effect of nonlinear radiation on MHD fluid flow considering mass transfer</b>   | <b>49</b> |
| 3.1      | Introduction of the Problem . . . . .                                              | 49        |
| 3.2      | Novelty of the Chapter . . . . .                                                   | 50        |
| 3.3      | Mathematical Formulation of the Problem . . . . .                                  | 50        |
| 3.4      | Solution by Homotopy Analysis Method . . . . .                                     | 54        |
| 3.4.1    | Convergence Analysis . . . . .                                                     | 55        |
| 3.5      | Result and Discussion . . . . .                                                    | 55        |
| 3.6      | Conclusion . . . . .                                                               | 67        |
| <b>4</b> | <b>Soret and Dufour impact on MHD Williamson fluid flow with varying viscosity</b> | <b>69</b> |
