List of Tables

Chapter 1

Table 1.1|Overview of hyperspectral and commercially available sensors with technical specifications……..12

Chapter 2

Table 2.1| Location, topography, and decadal mean of rainfall and temperature of three PAs……... 22

Table 2.2| Flight details of AVIRIS-NG data…….....33

Table 2.3| Sensor specifications of AVIRIS-NG data……...33

Table 2.4| Measured biophysical parameters of the tree species at each PA……..38

Chapter 3

Table 3.1| List of all the recorded species at three PAs during the field study…….....49

Table 3.2| Grouping of recorded tree species across three PAs…….51

Table 3.3| Abundant tree species recorded at each PA and their abbreviation…….....52

Table 3.4| Mean and median values of trunk DBH for abundant species at three PAs..... 52

Table 3.5| Estimated values of species number present at each PA derived from various methods assessed for measuring species richness along with their standard errors (s.e.)…….54

Table 3.6| Total number of crowns for each species at each PA along with their corresponding total pixel count for abundant species…….....59

Table 3.7| Accuracy values and classification parameters of the RF classifier applied over three PAs……..62

Table 3.8| Accuracy values and classification parameters of the SVM classifier applied over three PAs…….....62

Table 3.9| Confusion matrix for RF classification of SWS. The top row represents the reference trees, while the left column represents the classified trees…….63

Table 3.10| Confusion matrix for RF classification of VNP. The top row represents the reference trees, while the left column represents the classified trees…….64

Table 3.11| Confusion matrix for RF classification of MTR. The top row represents the reference trees, while the left column represents the classified trees…….....65

Table 3.12| | Confusion matrix for SVM classification of SWS. The top row represents the reference trees, while the left column represents the classified trees……..66

Table 3.13| Confusion matrix for SVM classification of VNP. The top row represents the reference trees, while the left column represents the classified trees……...67

Table 3.14| Confusion matrix for SVM classification of MTR. The top row represents the reference trees, while the left column represents the classified trees……...68

Table 3.15| Range, Variance, Kurtosis and CHV values for the first three principal components across 175 random plots in (a) SWS, (b) VNP, and (c) MTR……74
