

LIST OF TABLES
=====

<u>Table No.</u>	<u>Title</u>
1.	Physico-chemical conditions and algal biomass production using <u>Scenedesmus obliquus</u> .
2.	Physico-chemical conditions and algal biomass production using <u>Microcystis aeruginosa</u> .
3.	Biological changes using <u>Scenedesmus obliquus</u> .
4.	Bacteriological examination (Sanitary aspect) in high-rate aerobic oxidation pond using <u>Scenedesmus obliquus</u> .
5.	Distribution of a few important attributes among the 200 Bacterial isolates from the alga <u>Scenedesmus obliquus</u> treated high-rate aerobic oxidation pond on different detention periods.
6.	Important biochemical characteristics of the dominant bacteria in High-rate Aerobic Oxidation Pond using <u>Scenedesmus obliquus</u> on different detention periods.
7.	Dominant bacteria in High-rate Aerobic Oxidation pond with <u>Scenedesmus obliquus</u> on different detention periods.
8.	Dominating bacteria isolated from Assimilating and Endogenous phases of High-rate Aerobic Oxidation pond.
9.	Bio-chemical conditions using <u>Mixed algae</u> .
10.	Removal of nutrients during the assimilatory and endogenous phases of algal-bacterial symbiosis using the two algal cultures and Baroda sewage.
