

LIST OF FIGURES

Sr.No.	Contents	Page No.
1.	The viscosity of gruels from wheat and corn flour with different concentrations.	23
2.	Daily energy intake as % of energy requirements in relation to the dietary energy.	26
3.	The relationship between temperature and food viscosity with and without the addition of oil.	36
4.	Cyanogenic glycosides and their amino acid precursors	59
5.	Enzymatic decomposition of dhurrin to p-hydroxy benzaldehyde	64
6.1	Manufacture of raw flours	78
6.2	Manufacture of pre-cooked and roller dried mixtures	78
7	New Manufacturing process for infant flours and pastas	80
8.	Concentration of ARF and viscosity reduction	125
9.	Effect of temperature on the amylolytic activity of various ARFs.	130
10.	Rate of elaboration of HCN (ppm) in sorghum with progressive germination	137
11.	Effect of period of germination on distribution of HCN (ppm) in grain	140
12.	Effect of period of germination on distribution of HCN (ppm) in sprouts.	141
13.	Effect of heat treatment on HCN content of ARF with sprouts	145
14.	Effect of heat treatment on HCN content of ARF without sprouts	146
