

LIST OF TABLES

<u>Table No.</u>		<u>Page</u>
1	Number of fruits taken for each trial for chemical analysis	34
2	Details of enzyme assays	45-51
3.	Comparative data on the chemical composition of young and mature fruits of <u>Citrus acida</u>	61
4	Comparative data on the specific activities of the enzymes of glycolytic cycle in the young and mature fruits of <u>Citrus acida</u>	63
5	Comparative data on protein and amino nitrogen as well as free amino acid contents of the young and mature fruits of <u>Citrus acida</u>	67
6a	Studies on the utilization of glutamate for respiration by tissue slices of fruit tissues of <u>Citrus acida</u>	70
6b	Studies on the utilization of glutamate for respiration by tissue slices of fruit tissues of <u>Citrus acida</u>	71
7	Comparative data on the specific activities of the enzymes involved in protein breakdown and utilization of glutamate in the young and mature fruits of <u>Citrus acida</u>	73
8	Effect of enzyme concentration, period of incubation, glucose concentration and pH on hexokinase, activity in the fruit tissues of <u>Citrus acida</u>	75
9	Effect of enzyme concentration, period of incubation, glucose-6-phosphate concentration and pH on phosphohexose isomerase activity in the fruit tissues of <u>Citrus acida</u>	76
10	Effect of enzyme concentration, period of incubation, fructose-6-phosphate concentration and pH on phosphofructokinase activity in the fruit tissues of <u>Citrus acida</u>	77

<u>Table No.</u>		<u>Page</u>
11	Effect of enzyme concentration, period of incubation, fructose-1,6-diphosphate concentration and pH on fructose diphosphate-aldolase activity in the fruit tissues of <u>Citrus acida</u>	78
12	Effect of enzyme concentration, period of incubation, glyceraldehyde-3-phosphate, concentration and pH on glyceraldehyde-3-phosphate dehydrogenase activity in the fruit tissues	79
13	Effect of enzyme concentration, period of incubation, pyruvate concentration and pH on lactate dehydrogenase activity in the fruit tissues of <u>Citrus acida</u>	80
14	Effect of enzyme concentration, period of incubation, glucose-1-phosphate concentration and pH on phosphoglucomutase activity in the fruit tissues of <u>Citrus acida</u>	81
15	pH optima for the glycolytic enzymes obtained from different sources	83
16	Purification of glutamate dehydrogenase	84
17	Effect of enzyme concentration, period of incubation, pH and 2-oxoglutarate concentration on glutamate dehydrogenase activity in the fruit tissues of <u>Citrus acida</u>	86
18	Effect of $(\text{NH}_4)_2\text{SO}_4$ concentration on glutamate dehydrogenase activity	88
19	Effect of NADH_2 concentration on glutamate dehydrogenase activity	88
20	Effect of glutamate concentration on the reverse reaction catalysed by glutamate dehydrogenase	89
21	Effect of NAD concentration on the reverse reaction catalysed by glutamate dehydrogenase	89

<u>Table No.</u>		<u>Page</u>
22	Effect of metal ions and PCMB on glutamate dehydrogenase activity	91
23	Effect of period of storage on glutamate dehydrogenase activity	92
24	Reaction balance for glutamate dehydrogenase	92
25	Purification of alanine aminotransferase and aspartate aminotransferase	93
26	Effect of enzyme concentration, period of incubation, pH and alanine and 2-oxoglutarate concentrations on alanine aminotransferase activity in the fruit tissues of <u>Citrus acida</u>	95
27	Effect of enzyme concentration, period of incubation pH and glutamate and oxaloacetate concentrations on aspartate aminotransferase activity in the fruit tissues of <u>Citrus acida</u>	96
28	Effect of incubation temperature on alanine aminotransferase and aspartate amino-transferase	99
29	Effect of heat treatment on alanine amino-transferase and aspartate aminotransferase	100
30	Effect of heat treatment and dialysis on alanine aminotransferase and aspartate aminotransferase	101
31	Effect of citrate, ascorbate and PCMB on alanine aminotransferase and aspartate aminotransferase	102
32	Effect of period of storage on alanine aminotransferase and aspartate amino-transferase	104
33	Purification of glutamate decarboxylase	105
34	Effect of enzyme concentration, period of incubation, pH and glutamate concentration on glutamate decarboxylase activity in the fruit tissue of <u>Citrus acida</u>	106

<u>Table No.</u>		<u>Page</u>
35	Effect of pyridoxal phosphate concentration on glutamate decarboxylase activity	109
36	Effect of citrate, ascorbate and PCMB on glutamate decarboxylase activity	110
37	Effect of period of storage on glutamate decarboxylase activity	110
38	Effect of enzyme concentration, period of incubation, pH and glutamate concentration on glutamine synthetase activity in the fruit tissues of <u>Citrus acida</u>	111
39	Effect of enzyme concentration, period of incubation, pH and aspartate concentration on asparagine synthetase activity in the fruit tissues of <u>Citrus acida</u>	112
40	Effect of enzyme concentration, period of incubation, pH and casein concentration on protease activity in the fruit tissues of <u>Citrus acida</u>	113
41	Comparison of the characteristics of glutamate dehydrogenase obtained from different sources	115
42	Comparison of the characteristics of alanine aminotransferase obtained from different sources	116
43	Comparison of the characteristics of aspartate aminotransferase obtained from different sources	117
44	Comparison of the characteristics of glutamate decarboxylase obtained from different sources	118
