

Table of Contents

No.	Title	Pg
1.	Introduction	1
1.1.	Fundamentals of catalytic phenomena	1
1.2.	Catalysts and catalysis and their classification	2
1.3.	Catalyst components	3
1.3.1.	Active components	3
1.3.2.	Catalytic support	4
1.3.3.	Promoters	7
1.4.	Supported metal catalysts	9
1.5.	Features of supported metal catalysts	10
1.6.	Catalyst preparation	11
1.7.	Methods of incorporation of active species	11
1.7.1.	Co-precipitation / precipitation	11
1.7.2.	Deposition	12
1.7.3.	Ion exchange	13
1.7.4.	Impregnation	13
1.8.	Pretreatments	16
1.8.1.	Drying of gels	16
1.8.2.	Calcination	17
1.8.3.	Reduction	17
1.9.	Introduction	19
1.10.	Sol – gel chemistry	20
1.11.	Factors influencing sol – gel chemistry	22
1.11.1.	Nature of the metal	22
1.11.2.	Molecular structure of alkoxide precursors	23
1.11.3.	Hydrolysis ratio	24
1.11.4.	Catalysts (pH)	25
1.11.5.	The solvent	25
1.12.	Role of sol – gel materials in heterogeneous catalysis	28
1.13.	Conclusion	29
1.14.	Sol – gel chemistry of alumina	31
2.	Aim and scope of the investigation	36
2.1.	Objective	36
3.	Experimental techniques	40
3.1.	Preparation of alumina using oil drop technique	40
3.2.	The method	40
3.3.	Aluminium chloride sol	41
3.4.	Preparation of hexa methylene tetra amine (HMTA) solution	41
3.5.	Chemistry of oil drop technique	42
3.6.	Preparation of catalysts: the imp series	42
3.7.	Preparation of alumina support and catalysts by sol-gel technique	43
3.8.	Acid catalyzed synthesis of alumina and Pt-Sn/Al ₂ O ₃ catalysts by sol gel technique	43
3.8.1.	Hydrolysis	43
3.8.2.	Condensation	44

Table of Contents

No.	Title	Pg
3.9.	Base catalyzed synthesis of alumina and Pt-Sn/Al ₂ O ₃ catalysts by sol gel technique	45
3.10.	Characterization of alumina and catalysts	45
3.10.1.	Surface area and porosity	45
3.10.2.	Butene isomerisation	46
3.10.3.	Temperature programmed reduction	48
3.10.4.	Temperature programmed coke oxidation [TPCO]	50
3.10.5.	Temperature programmed desorption of ammonia [TPD]	52
3.10.6.	Platinum dispersion measurement	52
3.10.7.	Infra red (IR) spectroscopy	53
3.10.8.	Thermogravimetric analysis (TGA)	53
3.10.9.	Powder x – ray diffraction (XRD)	53
3.10.10.	Scanning electron microscopy (SEM)	54
3.10.11.	Catalytic activity evaluation	54
3.10.12.	Dehydrogenation of n- decane	55
4.	Studies on alumina support prepared by sol gel technique	57
4.1.	Preparation of alumina by sol – gel technique	57
4.2.	Characterization of alumina precursors	59
4.3.	Effect of sol-gel preparation parameters	62
4.3.1.	Effect of pH	62
4.3.2.	Evaluation of textural properties of sol-gel alumina	65
4.3.3.	Effect of solvents	66
4.3.4.	Water to diluent ratio	67
4.3.5.	Effect of hydrolysis level	68
4.3.6.	Effect of rate of hydrolysant addition	69
4.4.	Effect of ageing of sol	70
4.5.	Solvent removal and drying	71
4.6.	Calcination	72
4.7.	Morphological studies	73
4.8.	1 – butene isomerization	73
4.9.	Comparison of the characteristics of SG and OD alumina samples	75
5.	Studies on Pt-Sn/Al₂O₃ catalysts prepared by sol-gel method	77
5.1.	Preparation of catalysts and sample codes:	77
5.2.	Method of preparation:	79
5.3.	Characterization of catalysts	80
5.4.	Summary	93
6.	Studies on Pt-Sn/Al₂O₃ catalysts prepared by conventional method	95
6.1.	Preparation of catalysts and sample codes	95
6.2.	Characterization of catalysts	96
6.2.1.	Powder x-ray diffraction (XRD) studies:	96
6.2.2.	Active metals composition	97
6.2.3.	Textural properties	97

Table of Contents

No.	Title	Pg
6.2.4.	Acidity	98
6.2.5.	Temperature programmed reduction	99
6.2.6.	Metal dispersion	100
6.3.	Summary	100
7.	Influence of Preparation Methods on the Properties and Performance of Catalysts	102
7.1.	Role of preparation methods	102
7.2.	Preparation vs. properties	103
7.3.	Evaluation of catalytic activity for dehydrogenation of n-decane	104
7.3.1.	Methodology	104
7.3.2.	Correlations with activity	105
7.3.3.	Correlations with selectivity	110
7.3.4.	Correlations with deactivation	110
7.3.5.	Deactivation patterns: Sol-gel vs. Conventional catalysts	113
7.4.	Summary	115
8.	Summary and Conclusions	116
