

Acknowledgements

For the completion of this work I received assistance and advice from various individuals, and here I would like to acknowledge the help of some of them. I owe my greatest debt, of course, to Dr. Y. M. Naik for his valuable guidance and immense help, besides allowing me the time to pursue my goals in my own way. In fact, it is his interest and enthusiasm in conservation of amphibians, which inspired me to study the ecology of these strange forms. I also express my deep appreciation to Prof. Bonny Pilo, Head, Department of Zoology; Coordinator, UGC-DSA programme for allowing me to access to the laboratory facilities and also for his advice and help during the field studies. He read most part of this treatise and provided many helpful suggestions. Other teaching and non-teaching staff of the Department of Zoology also were of great help. Further, I should like to record my special thanks to Dr. P. K. Gadhia, Reader, Department of Biosciences, S. G. University, Surat who introduced me to the chromosome methodology.

I am greatly indebted to my friends Dr. B. Anoop Kumar, Dr. Saji Oommen, Dr. V. K. Murukesan and Mr P. K. Pradeep who made this study possible. I also acknowledge the help provided by my colleagues, Miss Jai Sule and Miss Veena Yadav during the final stage of this thesis.

The field studies of this work was conducted under the project "Eco-environmental and Wildlife Management Studies on Sardar Sarovar Submergence Area in Gujarat" sponsored by S.S.N.N.L., N.P.G. Government of Gujarat. During this project work, I have been assisted or accompanied in the field by many colleagues and friends; still others have collected specimens for me or made their own collections or photographs available to me. To these individuals special thanks are due: Dr. Raju Vyas, Dr. G. Pradeep Kumar, Dr. B. Suresh, Mrs. Isha Desai, Dr. Chintan Patel and Dr. Jayesh Bhatt. I also appreciate the help and advice received from all investigators of the project, especially Dr. N. Radhakrishnan.

A great deal of thanks goes to Dr. A. K. Sarkar (ZSI, Calcutta) for his help in identification of some anuran forms. I appreciate his hospitality in Calcutta as well as many lively discussions during his visits to Baroda. I am also grateful to the authorities of Forest Department, Government of Gujarat for granting permission to collect some frogs for this work. I extend my thanks to the following individuals: Dr. Sunita Patil (University of California), Dr. Murukesan (formerly at Swedish University of Agricultural Sciences, Uppsala) and Dr. Nita Shah (WII, Dehra Dun) who provided me with literature on amphibians or chromosomes; Dr. M. P. Gireesh Kumar for the information on some chemical compounds and Mr. Muralidharan for his help in statistical analysis.

I must record my thanks to my family members, especially to my brother Suresh, and my uncles for their support, love and encouragement.

Finally, I express my sincere thanks to Mr. Pinakin Joshi (P&S Computers Consultants) for his patience in scanning the karyotypes and for the final print out of this thesis.

K.R. Vinod
