## List of Figures

Figure 1.1 Principal alloying element in aluminium alloys and designation <sup>[2]</sup> 1
Figure 1.2 Application of aluminium alloys on the Boeing 777 <sup>[6]</sup> 2
Figure 1.3 Major high-strength aluminium alloy ranking <sup>[7]</sup> 2
Figure 1.4 Spectrum of aluminium alloys used in space applications. Practically, every grade
of wrought aluminium alloy is used for various applications based on its characteristics. The
age-hardenable aluminium alloys of 2XXX are used for earth-storable and cryogenic
propellant tanks, 6XXX alloys for water tanks of liquid engines, and 7XXX series are used
for engine components and heat shields. Aluminium alloy castings are used in liquid engines
