

List of Tables

Table 1.1 Solid solubility of elements in aluminium ^[9]	3
Table 2.1 Chemical composition of 7075 aluminium alloy as per standard ^[42–44]	7
Table 2.2 Properties of Al 7075-T6 ^[43]	8
Table 2.3 Chemical composition, eutectic phase, and strengthening phase for the Al-Zn-Cu-Mg system ^[70]	10
Table 2.4 Limit solubility of Cu and Zn in solid (Al) of Al-Cu-Zn system ^[83]	14
Table 2.5 Limit solubility of Mg and Zn in solid aluminium in the Al-Mg-Zn system ^[85]	14
Table 2.6 JMatPro TTT and CCT curve critical times and temperatures of 7075 ^[92]	18
Table 2.7 Addition of grain refiners and modifiers via different approaches by researchers.	23
Table 2.8 Summary of alloy elements, precipitates, and major effects on properties of Al-Zn-Mg-Cu ^[19]	25
Table 2.9 The researchers reported on details, components, reinforcement, additives, grain refinement, method, and characteristics.	26
Table 2.10 A summary of precipitates in aged 7XXX series Al alloys and their basic details.	63
Table 3.1 Operating parameters for tribology of oxide-added samples at various applied loads and rotational speed.	81
Table 4.1 Spectroscopy analysis of as-received Al 7075.	82
Table 4.2 Physical properties and Chemical analysis of high-temperature oxides.	83
Table 4.3 Mass spectroscopy analysis of Al 7075 after casting; a) as-cast, b) 2.5 wt.% added ZrO ₂ , c) 2.5 wt.% added TiO ₂ , d) 2.5 wt.% added ZrTiO ₄	84
Table 4.4 Recovery of Zr, and Ti by EDS analysis of the developed system of Al 7075 after casting.	84
Table 4.5 EDS analysis of the selected point/area in Figure 4.3. (in wt.%) and closest phases.	88
Table 4.6 Min., max., and mean grain size and area of all the systems	91
Table 4.7 Comparison of mechanical properties of cast Al7075 with oxide-added samples.	92
Table 4.8 Elemental mapping by EDS (wt.%)	99
Table 4.9 Mechanical properties of Al 7075; as-cast, quenched in ice, hot water for 30 min	

(H30), and hot water until cooled down (HTC).....	101
Table 4.10 Min., max., and mean grain size and area of as-cast and quenched Al 7075..	104
Table 4.11 Chemical composition of as-cast Al 7075 for double-step ageing.	106
Table 4.12 Environment-sensitive embedding energy of Zn, Mg, and Cu at the grain boundary and α -Al ^[309]	112
Table 4.13 Mechanical properties of as-cast, ZrO ₂ -added, TiO ₂ -added, and ZrTiO ₄ -added cast Al 7075 before and after ageing treatment.	115
Table 4.14 Operating parameters for tribology of AS, Z, and T samples at various applied loads and rotational speed with recorded weight and volume loss with scar diameter.....	118
Table 4.15 Mechanical properties of cast Al 7075 by different casting techniques.	124
Table 4.16 Mass spectroscopy of trials taken to get chemical composition within a limit of Al 7075.	125
Table 4.17 Comparative Mechanical properties of developed cast Al 7075 with Al 7075 cast from wrought and wrought Al 7075.....	127
