

## LIST OF TABLES

| Sr. No. | Table. No. | Title   | Page No. |
|---------|------------|---|----------|
| 1       | 2.1        | Sample break up of pilot study  | 27       |
| 2       | 2.2        | Items used in the pilot study   | 28       |
| 3       | 2.3        | Categories and percentages of responses of different sectors on violence experienced by self                      | 30       |
| 4       | 2.4        | Categories and percentages of responses of different sectors on violence experienced by colleagues                | 31       |
| 5       | 2.5        | Categories and percentages of responses of different sectors on the frequency of violence in the workplace.       | 32       |
| 6       | 2.6        | Categories and percentages of responses of different sectors on strategies of handling workplace violence.        | 33       |
| 7       | 2.7        | Categories and percentages of responses of different sectors on violence affect the performance of the employees. | 34       |
| 8       | 2.8        | Categories and percentages of responses of different sectors on people subjected to violence.                     | 35       |
| 9       | 2.9        | Categories and percentages of responses of different sectors on personality characteristics of the perpetrators   | 36       |
| 10      | 2.10       | Categories and percentages of responses of different sectors on general forms of workplace violence               | 38       |
| 11      | 2.11       | Categories and percentages of responses of different sectors on requisites for preventing workplace violence      | 39       |
| 12      | 2.12       | Categories and percentages of responses of different sectors on factors leading to workplace violence.            | 40       |
| 13      | 2.13       | Categories and percentages of responses of different sectors on immediate reaction against violence at workplace  | 41       |
| 14      | 2.14       | Categories and percentages of responses of different sectors on the rights of the employees                       | 42       |
| 15      | 3.1        | Items, factor loading and Eigen values on workplace violence  | 65-69    |
| 16      | 4.1        | Sample break-up according to demographic characteristics  | 87-88    |
| 17      | 4.2        | Description of the tools of the study   | 106      |
| 18      | 4.3        | Mean, SD and F ratio of male & female employees on psychosocial parameters  | 109      |
| 19      | 4.4        | Mean, SD and F ratio of male & female employees on the perception of workplace violence dimensions                | 111      |
| 20      | 4.5.1      | Multiple comparison of means of four sectors on the perception of positive psychosocial parameters                | 113      |

|    |        |  |     |
|----|--------|--|-----|
| 21 | 4.5.2  | Multiple comparison of means of four sectors on the perception of negative psychosocial parameters                                     | 114 |
| 22 | 4.6    | Multiple comparison of means of four sectors on perceiving workplace violence dimensions   | 118 |
| 23 | 4.7.1  | Interaction effect of gender and sector on the perception of positive psychosocial parameters  | 121 |
| 24 | 4.7.2  | Interaction effect of gender and sector on the perception of negative psychosocial parameters  | 122 |
| 25 | 4.8    | Interaction effect of gender and sector on the perception of workplace violence dimensions   | 126 |
| 26 | 4.9.1  | Mean differences in positive psychosocial parameters among employees with different duration of work experience                        | 128 |
| 27 | 4.9.2  | Mean differences in negative psychosocial parameters among employees with different duration of work experience                        | 129 |
| 28 | 4.10   | Mean differences in workplace violence dimensions among employees with different duration of work experience                           | 134 |
| 29 | 4.11.1 | Mean, SD and F ratio to show differences across different age groups on the perception of positive psychosocial parameters             | 136 |
| 30 | 4.11.2 | Mean, SD and F ratio to show differences across different age groups on the perception of negative psychosocial parameters             | 136 |
| 31 | 4.12   | Mean, SD and F ratio to show differences across different age groups on the perception of workplace violence dimensions                | 139 |
| 32 | 4.13.1 | Mean differences in positive psychosocial parameters among employees with different marital status                                     | 141 |
| 33 | 4.13.2 | Mean differences in negative psychosocial parameters among employees with different marital status                                     | 141 |
| 34 | 4.14   | Mean differences in workplace violence dimensions among employees with different marital status  | 143 |
| 35 | 4.15.1 | Mean, SD and F ratio to show differences across level of education in positive psychosocial parameters                                 | 145 |
| 36 | 4.15.2 | Mean, SD and F ratio to show differences across level of education on the perception of negative psychosocial parameters               | 145 |
| 37 | 4.16   | Mean, SD and F ratio to show differences across level of education in workplace violence dimensions                                    | 148 |
| 38 | 4.17.1 | Mean, SD and F ratio to show differences among the different levels of job on the perception of positive workplace violence dimensions | 151 |
| 39 | 4.17.2 | Mean, SD and F ratio to show differences among the different levels of job on the perception of negative workplace violence dimensions | 151 |
| 40 | 4.18   | Mean, SD and F ratio to show differences among the different levels of job in the perception of workplace violence dimensions          | 155 |

|    |        |  |       |
|----|--------|--|-------|
| 41 | 4.19.1 | Mean, SD, F ratio and significance to show differences among the different levels of job in positive psychosocial parameters | 156   |
| 42 | 4.19.2 | Mean, SD, F ratio and significance to show differences among the different levels of job in negative psychosocial parameters | 156   |
| 43 | 4.20   | Mean, SD, F ratio and significance to show differences among the different levels of job in workplace violence dimensions    | 157   |
| 44 | 4.21   | Correlation matrix   | 158-A |
| 45 | 4.22   | Results of the regression co-efficient for psychosocial parameters predicting workplace bullying                             | 172   |
| 46 | 4.23   | Results of the regression co-efficient for psychosocial parameters predicting actively hostile behavior                      | 173   |
| 47 | 4.24   | Results of the regression co-efficient for psychosocial parameters predicting illegitimate pressure                          | 174   |
| 48 | 4.25   | Results of the regression co-efficient for psychosocial parameters predicting humiliation                                    | 175   |
| 49 | 4.26   | Results of the regression co-efficient for psychosocial parameters predicting discrimination & sexual harassment             | 176   |
| 50 | 4.27   | Results of the regression co-efficient for psychosocial parameters negatively predicting workplace bullying                  | 177   |
| 51 | 4.28   | Results of the regression co-efficient for psychosocial parameters negatively predicting actively hostile behavior           | 178   |
| 52 | 4.29   | Results of the regression co-efficient for psychosocial parameters negatively predicting illegitimate pressure               | 179   |
| 53 | 4.30   | Results of the regression co-efficient for psychosocial parameters negatively predicting humiliation                         | 180   |
| 54 | 4.31   | Results of the regression co-efficient for psychosocial parameters negatively predicting discrimination & sexual harassment  | 181   |
| 55 | 4.32   | Results of the regression co-efficient for workplace violence dimensions predicting counterproductive work behavior          | 183   |
